

## LIGHTING TECHNOLOGY PRODUCTS

## Vossloh-Schwabe

Vossloh-Schwabe is not merely a provider of top-quality system solutions for the lighting industry, but above all makes a competent and innovative contribution to setting market trends in the field of LED lighting.

Numerous VS project solutions implemented on the basis of entire LED systems are currently satisfying the high requirements placed on energyefficient lighting all over the world.

Employing approximately 1000 people in more than 20 countries, Vossloh-Schwabe is represented all over the world. As a subsidiary of the Japanese Panasonic Group, VS can draw on extensive resources for R\&D as well as for international expansion activities.

A highly motivated workforce, comprehensive market knowledge, profound industry expertise as well as eco-awareness and environmental responsibility show Vossloh-Schwabe to be a reliable partner for the provision of optimum and cost-effective LED lighting solutions.
But Vossloh-Schwabe naturally also continues to provide all components needed in the field of conventional lighting technology.

Vossloh-Schwabe's dedication to delivering superior quality is reflected in its ISO 9001 certification.

Vossloh-Schwabe is ready to embark on a collaborative journey into an economically illuminated LED future.

Some lighting applications continue to rely on conventional technologies.

Please see our separate Standard Technology Catalogue for product details.

## LED SYSTEM

## LED MODULES, OPERATING DEVICES AND CONNECTING TECHNOLOGY

Vossloh-Schwabe is not merely a provider of top-quality system solutions Systems and Components for Lighting Applications with LEDs

Thanks to the characteristics and advantages of LED modules over conventional light sources, there is almost no limit to the ways in which LED modules can be used, and new applications are being found on a continuous basis.

The usefulness of LED modules stretches from architecture and furniture design right through to creating atmospheric lighting in homes, shops, bars and restaurants. LED modules can be integrated into existing lighting systems or integrated into the respective application as a separate light source. These LED modules are dimmable if used with a suitable LED ballast and a matching control unit.

Vossloh-Schwabe develops and manufactures LED modules in different performance classes and shapes on the basis of $C O B$ and SMD technology with a comparably minimal decrease in luminous flux over a module's service life and with extremely high colour stability.

The DigilED series makes a high-performance range of colour-control modules for polychromatic control of LED modules using RGB technology available to users. The digital technology and user-friendly interfaces guarantee LED lighting is simple to use.

Vossloh-Schwabe's high-quality electronic LED control gear, which is available in various performance classes and designs, is designed to supply power to voltage- and constant-current-operated LED applications.

Vossloh-Schwabe's range of LED lighting systems and components is rounded off by connection components for integrating LED modules into lighting applications. Different joining elements to match the individual LED modules guarantee simple, low-cost and soldering-free assembly.

Giordano, Jakarta

Foyer of the Torre Agbar tower

## Giordano in the Living World Mall, Jakarta

The entire Living World Mall in Jakarta is illuminated solely using LEDs. The mall is located in Jakarta's Serpong business park and features a large selection of international brands, including the fashion outlet Giordano.

Due to the increase in energy costs in Indonesia, retailers and tenants in the Living World Mall were encouraged to convert to LED lamps and with that ensure a reduction in power consumption.

The choice was easy to make: Vossloh-Schwabe's highly efficient PAR38 LED lamps with their service life of up to 45,000 hours and a correspondingly low need for maintenance proved to be ideal for the project. Thanks to the E27 base and $38^{\circ}$ radiation angle of the PAR38 lamps, exchanging the previously installed 70 W HID lamps required only minimal effort. Apart from the expected energy savings, these new LED lamps have also resulted in a decisive reduction in $\mathrm{CO}_{2}$ emissions in the interest of countering global warming.

Available in different colour temperatures and with various angles of radiation, these dimmable LED lamps are mercury-free, energy-saving and will not impair products (IR- and UV-free). In addition, their energy efficiency, eco-friendliness and high light output have set standards for other Giordano outlets. LED lamps are set to feature in further Giordano branches in the future

[^0]
## Torre Agbar, Barcelona

With its height of 142 metres, 34 floors above ground level and a usable floor space totalling 39,000 square metres, the Torre Agbar - Catalan for "Agbar Tower" - is one of Catalonia's tallest buildings and the new symbol of the 22@Barcelona technology centre.

Designed by architect Jean Nouvel in cooperation with the b720 Arquitectos company, the tower's dazzling, 16,000 square metre fac̦ade lets the tower appear like a water fountain. The outer aluminium shell of the tower resembles the skin of a reptile or a large, fluid, organic mass. The mountains of Montserrat and the works of the Catalan architect Antoni Gaudí, served as inspiration for the shape of the tower.

The special colours of the tower were also chosen for a reason. As the client, Grupo Agbar, is Barcelona's municipal waterworks (Aguas de Barcelona, or Aigües de Barcelona in Catalan), this influenced the tower's iridescent and colourful appearance. The immediate vicinity of the building was designed in such a way as to give onlookers the impression that the tower is standing in a body of water.

Consisting mainly of office space, a cafeteria and a multi-purpose hall, the building was inaugurated by the Spanish King on 16 October 2005.

For Vossloh-Schwabe, the "Torre Agbar" project began in September 2011. A need had been identified to improve the lighting situation in the foyer, the only solution to which was energy-efficient LED lighting in combination with DALI drivers and a LiCS Indoor light management system made by Vossloh-Schwabe. In cooperation with the customer, a projectspecific luminaire was developed on the basis of the VS LED Shop module (3000 K).

LED System Overview by Application Fields

## ARCHITECTURE

## LED modules

- M-Class: IP20, IP66, Allround, LightEngine
- S-Class: IP20, IP66, Allround, LightEngine
- AreaLED: IP20, IP66, Allround, LightEngine
- Streetlight FlatEmitter SMD

## LED drivers

- Capacity range: 40-150 W
- Current supply: 350-1400 mA
- Dimming: DALI, PUSH, 1 - 10 V, power-reduction
- Variants: PrimeLine and Comfortline

## Accessories

Luminaire protection device, power switches, switch units

## LED modules

- High Power 24 V CA: White and RGB
- LEDLine Flex SMD Professional Indoor 24 V: White; Standard and High Brightness
- AluLED: IP20, IP64; White and RGB

## LED Converters

- Comfortline 24 V :

Capacity range: $20,70,75,100,130,150 \mathrm{~W}$
Degree of protection: IP20, IP67

- Comfortline 12 V :

Capacity range: $12,15,30,50,70 \mathrm{~W}$
Degree of protection: IP20, IP67

## LED Colour control

- DigilED: Manuell, DALI, DMX, IR, RF, Push, Mono, Slave

## Accessories

Connecting technology: flatband cable, connector, PCB distributor

## LED modules

- SYM I: IP20, IP66, Allround, LightEngine
- SYM II: IP20, IP66, Allround, LightEngine
- LUGA Industrial
- Industrial FlatEmitter SMD
- LUGA C

## LED Converters

- Capacity range: 20-230 W
- Current supply: 350-1400 mA
- Dimming: DALI, PUSH, 1 - 10 V
- Variants: Comfortline and EasyLine

## Accessories

Luminaire protection device, inrush current limiter, resistor network

## LED modules

- LUGA Line: Linear COB modules
- LED Line SMD: Kit, ECO, L14/28/56, Slim
- LED Line Fix: LUGA and SMD
- LED Line AluFix: LUGA and SMD
- LED Light Panel SMD
- AreaLED: IP20, IP66, Allround, LightEngine
- Streetlight FlatEmitter SMD

## LED drivers

- Capacity range: 40-150 W
- Current supply: 350-1400 mA
- Dimming: DALI, PUSH, 1-10 V, power-reduction
- Variants: PrimeLine and Comfortline

## Accessories

Luminaire protection device, power switches, switch units

## LED modules

- LUGA Shop

## LED-Spots and Downlights

- Shopline: Standard, NEXT, EVO
- LUGA C
- Activeline: LUGA, COB 9.1, COB 7.1, COB 6.1, Quad
- Downlights Pro and Prime

## LED drivers

- Capacity range: 10-60 W
- Current supply: 250-1050 mA

## LED Lamps

- AR111
- PAR30, PAR38
- Dimming: DALI, PUSH, 1-10 V, 3C
- GUlO
- Variants: PrimeLine, Comfortline and Easyline

## Accessories

Luminaire protection device, inrush current limiter, resistor network

## LED modules

- PowerEmitter
- TriplePowerEmitter

## LED modules

for direct connection to mains

- LEDSpot ReadyLine IP and MR16
- ReadyLine: S, DL and C

## LED drivers

- Capacity range: 5,2-36 W
- Current supply: 150-1050 mA
- Dimming: Phase-cut dimmable
- Variants: ComfortLine and Easyline

## Accessories

Reflectors, Optics

## LED Spots and Downlights

- Single LEDSpots
- Activeline Pro
- DecolEDs

## LED Lamps

- MR16
- GUlO
(

## CONSTANT CURRENT LED MODULES, DRIVERS AND ACCESSORIES

The LED modules dealt with in this chapter are constant-currentoperated, built-in modules whose circuit board does not feature its own power-supply electronics. Circular and linear modules featuring various chip types are available.

Ensuring constant-current control of LED modules benefits permanent operation, efficiency (lm/Watt) and the service life of LEDs. Constant current control is particularly important for high-performance LEDs, as a module brightness of up to $10,000 \mathrm{Im}$ can be achieved.

Various brightness levels can be set by selecting the requisite operating Current ( $350 \mathrm{~mA}, 500 \mathrm{~mA}, 700 \mathrm{~mA}, 1050 \mathrm{~mA}$ ). In this regard, the maximum admissible current must never be exceeded and heat development must be monitored.

## Typical applications

- Installation in luminaires for general lighting purposes
- Residential lighting
- Reading lamps and spots
- Entertainment
- Retail lighting
- Architectural lighting
- Street lighting

The specifications contained in this catalogue can change due to technical innovations. Any such changes will be made without separate notification.

Please read the safety and installation instructions on the individual products as well as further technical information provided in the extensive product descriptions at
www.vossloh-schwabe.com.

## Constant-current LED modules for all applications

Vossloh-Schwabe's constant-current-operated LED modules are characterised by their extreme efficiency, long service life and colour brilliance. The extensive range of different designs and brightness levels results in a multitude of application options.

Whether they are used for indoor or outdoor applications: VS LED modules can be found as a decorative and functional lighting source in offices, homes, buildings and on our streets. They are:

- highly efficient,
- characterised by a high CRI and
- extremely versatile.

## Constant-current drivers for current-operated LED modules

To ensure safe operation of LEDs that are connected in series, the operating current must be kept at a constant value by the ballast. It is recommended to operate all high-performance LED modules in combination with an external constant-current driver.

To ensure the same current flows through every LED, high-performance LEDs can only be connected in series. For each respective application, the source of the constant-current must be selected to ensure the required current and sufficient voltage are supplied to the LED modules. The number of LED modules that can be connected to control gear is dependent on the forward bias of the respective modules.

## LUGA Line RX 2015

## Built-in PCB lighting modules

The new LUGA Line RX 2015 is characterised by its particularly easy-to-use mounting and connection options (ZHAGA-compliant hole spacing).
Thanks to producing a homogeneous light field without any discernible individual light points, these LED modules are ideal for use in reflectors in luminaires constructed for T 5 and T 8 lamps.

## Technical notes

Dimensions: $280 \times 18.4 \mathrm{~mm}$ und $93 \times 18.4 \mathrm{~mm}$
On-board push terminal system WAGO 2059
Allowed operating temperature at $t_{c}$ point:

$$
-40 \text { to } 85^{\circ} \mathrm{C}
$$

Use of external LED constant-current drivers required
Efficiency up to $148 \mathrm{~lm} / \mathrm{W}$
Colour rendering index $R_{\mathrm{a}}$ : $>80 />90$
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Lumen maintenance L80/B 10 :
50,000 hrs. (If 700 mA )
Unit: 60 pcs.

## Typical applications

- Office lighting
- Retail lighting
- T5/T8 replacement as built-in module
- Furniture lighting

Ref. No.: 551039

## Thermally conductive adhesive tape

Dimensions: $278 \times 13 \mathrm{~mm}$
Ref. No.: 548179

## Constant-current System - Linear

## LED Line SMD Kit

## Built-in PCB lighting modules with optics

The LED Line SMD kit consists of SMD modules in two lengths ( 280 mm and 560 mm ) as well as matching optics. LED modules and optics are an ideal LED solution to replace luminaires with T5/T8 lamps.
Both the optics and LED modules are easy to attach using standardised fixing holes (ZHAGAcompliant hole spacing) and screws.

VS also provides optics that are perfect for office, industrial and shop (e.g. supermarket) lighting.

## Technical notes

Dimensions:
WU-M-480/501: $279.6 \times 39.6 \mathrm{~mm}$
WU-M-481 / 502: $560.6 \times 39.6 \mathrm{~mm}$
On-board push terminal system
Allowed operating temperature at $t_{c}$ point:

$$
-20 \text { to } 75^{\circ} \mathrm{C}
$$

Use of external LED constant-current drivers required
Efficiency up to $170 \mathrm{~lm} / \mathrm{W}$
Colour rendering index $\mathrm{Ra}_{\mathrm{a}}:>80$
Lumen maintenance L80/B 10:
60,000 hrs. (If $350 \mathrm{~mA} ; \mathrm{tp} 50^{\circ} \mathrm{C}$ )

## Typical applications

- Office lighting
- Retail lighting
- Industrial lighting
- T5/T8 replacement as built-in module

## LED Line SMD Slim

## Equipped with SMD Line LED modules

Consisting of one energy-efficient LED Line SMD Slim, a thermo-conductive resin adhesive tape and a cover, this LED Line Slim constitutes an ideal way of facilitating direct conversion to modern LED technology.

Enabling fast, reliable and flexible fixing inside the luminaire via

- adhesive tape
- clip fitting (Zhaga-compliant)
- screw fitting
the unit constitutes an ideal solution for indoor linear lighting applications.

## Lighting modules with cover

LED Line SMD Slim consists of an energy-efficient linear SMD module and a cover with several attachment options. The module was designed for integration into indoor luminaires providing direct or indirect light.

The fast, safe and flexible adhesive-based, click on (ZHAGA-compliant L56W2 hole spacing) or screw-based options for fixing the module within the luminaire constitute an ideal solution for linear lighting applications.

The light module is fitted with either a clear or diffuse cover that serves to protect it and, in the diffuse version, to reduce glare and distribute light in a similar manner to a fluorescent lamp.

## Optical characteristics

at $t_{p}=50^{\circ} \mathrm{C}$
The specified values apply only to the version of the LED module without a cover.
The following efficiency levels can be achieved when using a cover: clear (97\%), diffuse (90\%)

## Constant-current System - Linear

## LED Line Fix LUGA 2015

Lighting modules with holder and cover
LED Line Fix LUGA consists of an energy-efficient linear COB module, a holder with various attachment options and a cover. The module was designed for integration into indoor luminaires providing direct or indirect light.

The fast, safe and flexible adhesive-based, click on (ZHAGA-compliant L28/L56W4 hole spacing) or screw-based options for fixing the module within the luminaire constitute an ideal solution for linear lighting applications.

The light module forms a single unit consisting of a holder made of a thermoconductive polymer plus a clear or diffuse cover that protects the LED module and electrically isolates it from the luminaire.

The diffuse cover reduces glare and distributes light in a similar manner to a fluorescent lamp.

## Technical notes LUGA Line module

On-board push terminal system: Electrical connection with lateral connection leads 28AWG
Allowed operating temperature at tc point: -40 to $85^{\circ} \mathrm{C}$
Efficiency up to $160 \mathrm{~lm} / \mathrm{W}$
Colour rendering index $\mathrm{Ra}_{\mathrm{a}}$ : 80
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Lumen maintenance L90/B 10 :
55,000 hrs. (IF 700 mA )

## Typical applications

- Office and school lighting
- Retail lighting
- Industrial lighting
- For replacement of T5 and T8 lamps

## Constant-current System - Linear

## LED Line Fix LUGA 2015-280 mm

## Technical notes LED Line Fix holder

Holder material: thermo-conductive resin Lead exit: lateral or base wiring
When joining linear modules in a row, a minimum clearance of 1 mm between the fixing units must be observed due to thermal expansion.
The LED modules of versions with a cover are already fully wired. Additional connectors must be ordered separately for versions without a cover.

## LED Line Fix LUGA 2015-560 mm

## Technical notes LED Line Fix holder

Holder material: thermo-conductive resin Lead exit: lateral or base wiring
When joining linear modules in a row, a minimum clearance of 1 mm between the fixing units must be observed due to thermal expansion.
The LED modules of versions with a cover are already fully wired. Additional connectors must be ordered separately for versions without a cover.

## LED Line Fix SMD

Lighting modules with holder and cover
LED Line Fix SMD consists of an energy-efficient linear SMD module, a holder with various attachment options and a cover. The module was designed for integration into indoor luminaires providing direct or indirect light.

The fast, safe and flexible adhesive-based, click on (ZHAGA-compliant L28/L56W4) hole spacing) or screw-based options for fixing the module within the luminaire constitute an ideal solution for linear lighting applications.

The light module forms a single unit consisting of a holder made of a thermoconductive polymer plus a clear or diffuse cover that protects the LED module and electrically isolates it from the luminaire.

The diffuse cover reduces glare and distributes light in a similar manner to a fluorescent lamp.

## Electrical characteristics

at $t_{p}=50^{\circ} \mathrm{C}$
The specified values apply only to the version of the LED module without a cover.
The following efficiency levels can be achieved when using a cover: clear ( $97 \%$ ), diffuse ( $90 \%$ )

## Technical notes SMD Line modules

On-board push-in terminals: $0.34 \mathrm{~mm}^{2}$, for solid leads Allowed operating temperature at tc point:

$$
-20 \text { to } 75^{\circ} \mathrm{C}
$$

Use of external LED constant-current drivers required
Efficiency up to $166 \mathrm{~lm} / \mathrm{W}$

Colour rendering index $\mathrm{Ra}_{\mathrm{a}}$ min. 80
Colour accuracy: 3 SDCM
Lumen maintenance L80/B 10 :

$$
\left.>60,000 \text { hrs. (IF } 700 \mathrm{~mA}, \mathrm{tp}_{\mathrm{p}}=50^{\circ} \mathrm{C}\right)
$$

## Typical applications

- Office and school lighting
- Retail lighting
- Industrial lighting
- For replacement of T5 and T8 lamps

With clear cover
With diffuse cover

## LED Line AluFix LUGA 2015

Lighting modules with holder and cover
LED Line AluFix LUGA consists of an energy-efficient linear COB module, an aluminium holder and a clear cover or, alternatively, optics. The module was designed for integration into indoor luminaires providing direct or indirect light.

The light module is available with up to five pre-wired LUGA modules in lengths of 305 to $1,429 \mathrm{~mm}$.

The robust aluminium holder serves to optimise thermal management and is easy to attach using M3 screws. The clear or diffuse cover protects LED modules from environmental factors.
The diffuse cover reduces glare and distributes light in a similar manner to a fluorescent lamp.

Enabling the kind of light distribution typically required in offices or shops, the optics versions facilitate luminaire designs that can do without an additional light guidance system. The high-quality optics consist of only one unit, regardless of its length, and therefore provide optimal protection for LED modules and ensure homogeneously illuminated surfaces without optical interruptions.

## Technical notes

Further shapes and optics on request.
For one to five LUGA Line modules
On-board push terminal system: Electrical connection with lateral connection leads 28AWG
Allowed operating temperature at $t_{c}$ point:

$$
-40 \text { to } 85^{\circ} \mathrm{C}
$$

Use of external LED constant-current drivers required:
for drivers with UOUT < 150 V DC
Efficiency up to $157 \mathrm{~lm} / \mathrm{W}$
Colour rendering index $\mathrm{Ra}_{\mathrm{a}}$ > 80
Colour accuracy initially: 3 SDCM; after 50,000 hrs. operating time: 4 SDCM
Lumen maintenance L90/B 10 :

$$
55,000 \mathrm{hrs} .\left(\mathrm{I}_{\mathrm{F}} 700 \mathrm{~mA}\right)
$$

## Typical applications

- Office and school lighting
- Retail lighting
- Industrial lighting
- For replacement of T5 and T8 lamps

## LED Line AluFix SMD <br> - Cover

Lighting modules with holder and cover
LED Line AluFix SMD consists of an energy-efficient linear SMD module, an aluminium holder and a clear or diffuse cover. The module was designed for integration into indoor luminaires providing direct or indirect light.

The light module is available with up to five pre-wired SMD modules in lengths of 305 to $1,429 \mathrm{~mm}$ and is thus an ideal component for LED lighting strips.

The robust aluminium holder serves to optimise thermal management and is easy to attach using M3 screws. The clear or diffuse cover protects LED modules from environmental factors.

The diffuse cover reduces glare and distributes light in a similar manner to a fluorescent lamp.

## Technical notes

Allowed operating temperature at $t_{c}$ point: -20 to $75^{\circ} \mathrm{C}$
Use of external LED constant-current drivers required: for driver with UOUT < 250 V DC
Efficiency up to $166 \mathrm{~lm} / \mathrm{W}$

With clear cover

With diffuse cover

Colour rendering index $\mathrm{Ra}_{\mathrm{a}}$ min. 80
Colour accuracy: 3 SDCM;
Lumen maintenance L80/B 10

$$
\left.>60,000 \text { hrs. (IF } 700 \mathrm{~mA}, t_{p}=50^{\circ} \mathrm{C}\right)
$$

Further shapes and optics on request.

## Typical applications

- Office and school lighting
- Retail lighting
- Industrial lighting
- For replacement of T5 and T8 lamps

## Optical characteristics

at $t_{p}=50^{\circ} \mathrm{C}$ | The following efficiency levels can be achieved when using a cover: clear (97\%), diffuse ( $90 \%$ )

## Constant-current System

## LED Light Panel SMD

## Built-in lighting modules

The new LED light panels are a highly effective SMD solution for producing very homogeneous, widely distributed light. They are particularly suitable for integration in louvered luminaires $(600 \times 600 \mathrm{~mm})$.

These LED SMD modules are available in various shades of white and permit easy, cost-effective and solder-free connection using push-in connectors.

## Technical notes

Dimensions: $249 \times 249 \mathrm{~mm}$
On-board push-in connector
Fixing holes: $\varnothing 4.5 \mathrm{~mm}$

Use of external LED constant-current drivers required
Efficiency up to $190 \mathrm{~lm} / \mathrm{W}$
Colour rendering index Ra: typ. 85
Lumen maintenance L80/B 10:
up to 60,000 hrs. (IF $350 \mathrm{~mA}, \mathrm{t}_{\mathrm{p}}=70^{\circ} \mathrm{C}$ )
Unit: 50 pcs.

## Typical applications

- Office lighting
- Retail lighting
- T5/T8 replacement as built-in module
- Furniture lighting
- Backlighting for advertising

## Products under development; preliminary technical datas

[^9]
## LUGA Shop 2015 PCB - 1000 Im to 8000 lm

## Built-in lighting modules

This PCB version of the LUGA Shop 2015 series
provides the option of simply replacing LED modules
within their holder.

Simple and secure attachment is enabled with
separate holders (see page 42).

## Technical notes

Dimensions: $19 \times 19 \mathrm{~mm}, 28 \times 28 \mathrm{~mm}$
Light emitting surface (LES): $\varnothing 14 \mathrm{~mm}, \varnothing 17 \mathrm{~mm}, \varnothing 20 \mathrm{~mm}$
On-board push-in terminal
Beam angle: $120^{\circ}$
Allowed operating temperature at $t_{c}$ point:

$$
-40 \text { to } 80^{\circ} \mathrm{C}
$$

Use of external LED constant current driver
Efficiency up to $172 \mathrm{~lm} / \mathrm{W}$
Colour rendering index Ra: typ. > $70 />80 />90$
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Lumen maintenance L90/B 10 :

$$
>52,000 \mathrm{hrs} .\left(\mathrm{I}_{\mathrm{F}} 700 \mathrm{~mA}, \mathrm{t}_{\mathrm{p}}=65^{\circ} \mathrm{C}\right)
$$

Unit: 175 pcs. (DMS099),
100 pcs. (DMS 120/DMS 150)

## Typical applications

Integration in

- Reflector luminaires
- Flat surface-mounting luminaires
- Cladding illumination
- Suspended luminaire with external control gear

For use in

- Retail lighting

- Furniture lighting
- Stairway and corridor illumination

## LUGA Shop 2015 PCB - Pearl White

## Characteristics

- Brilliant white light
- For retail lighting, especially fashion lighting
- Similar colour impression like C-HI lamps
- Highly efficient: up to $123 \mathrm{Im} / \mathrm{W}$

LUGA Shop 2014 PCB - Pearl White - CRI Ra> 90

## LUGA Shop 2015 PCB - FOOD

## Characteristics

- Optimized for use in all retail areas - especially for fresh food (bread, fruits, vegetables, meat)

| Type |
| :--- |

[^12]
## PCB Holder for LUGA Shop 2015

For DMS099* * * / DMS 120* * F / DMS 150* * *F

The combination of PCB version and holder provides
the option of simply replacing LED modules within their
holder. Simple and secure attachment is enabled with
a separate holder.

The PCB clicks into the opening on the reverse
of the holder. In doing so, care must be taken
to ensure correct polarity is maintained. The holder
with the inserted PCB is then turned around and
fixed with two screws. The holder also features
lateral connection openings into which the electrical
leads can be pushed.
Dependent on the used thermal conductive material and the power classes the expected service life times can differ from the values on the data sheet
LUGA Shop 2015 PCB.

## LUGA Shop 2015 holder

For LED LUGA Shop 2015 PCB DMS 120 and DMS 150
Dimensions $(\varnothing \times H)$ : $50 \times 4.2 \mathrm{~mm}$
Material: PBT, white
Fixing holes for screws M3
Hole distance: 35 mm
Unit: 500 pcs.
Type: 89720
Ref. No.: $559164 \quad \varnothing 50 \mathrm{~mm}$

## LUGA C 2015-500 lm to 4000 lm

## Built-in lighting modules

Due to their tiny size, the LUGA C modules are particularly suitable as a replacement for mains and low-voltage halogen lamps.
As LUGA C modules are capable of producing
lumen packages of up to 4000 lm , they can also
be used for retail lighting and in downlights.

## Technical notes

Dimensions
DMC112: $13.5 \times 13.5 \times 1.7 \mathrm{~mm}$
DMC104/DMC115/
DMC118: $19 \times 19 \times 1.7 \mathrm{~mm}$
Light emitting surface (LES)
DMC112: $\varnothing 8 \mathrm{~mm}$
DMC104/DMC115: $\varnothing 11.1$ mm
DMC118: $\varnothing 13.8 \mathrm{~mm}$

## DMC112C**E

DMC104C**E / DMC115C**E / DMC104D31EP / DMC115D31EP

Unit:
225 pcs. (DMC112)
175 pcs. (DMC104/DMC115/DMC118)

## Typical applications

Integration in

- Reflector luminaires for replacement of

Halogen mains and low-voltage lamps

- Flat surface-mounting luminaires
- Downlights

For use in

- Residential lighting
- Furniture lighting
- Stairway and corridor illumination

## DMC118C**E / DMC118D31EP

$\stackrel{\square}{\square}$
-40 to $85^{\circ} \mathrm{C}$
-40 to $80^{\circ} \mathrm{C}(\mathrm{DMC104}:>500 \mathrm{~mA})$
-40 to $75^{\circ} \mathrm{C}($ DMC 118: > 700 mA$)$
Use of external LED constant current driver
Efficiency up to $167 \mathrm{~lm} / \mathrm{W}$
Colour rendering index $\mathrm{Ra}_{\mathrm{a}}$ : 880
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Lumen maintenance L90/B 10
DMC112: 53.000 hrs. (IF 150 mA$)$
DMC 104: 48.000 hrs. (IF 350 mA )
DMC115/DMC118: 50.000 hrs. (If 350 mA )

$\stackrel{\square}{\square}$

## LUGA C 2015 - 500 Im to 1000 lm

## Characteristics

- Optimized for lumen packages $\leq 1000 \mathrm{~lm}$
- Highly efficient: up to $134 \mathrm{Im} / \mathrm{W}$

## LED Industrial and Hall Lighting

These LED modules are suitable for illuminating industrial, production, sports and warehouse facilities as well as for petrol stations (especially SYM II).

These modules were designed for built-in into luminaire casings. They enable a modular luminaire design.

The modules are available in four shapes $(4,16,32$ or 64 LEDs) and in three white colour tones.

## Technical notes

LED built-in module for integration into luminaires 4, 16, 32 or 64 high-efficient High Power LEDs Allowed operating temperature at $t_{c}$ point

$$
\text { at } \mathrm{IF}=700 \mathrm{~mA}:-20 \text { to } 85^{\circ} \mathrm{C}
$$

Use of external LED constant current driver
Design for optimum thermal management
Efficiency up to $136 \mathrm{~lm} / \mathrm{W}$
Lumen maintenance L70/B 10 :
52,000 hrs. (If 1050 mA ) at $t_{p} 60^{\circ} \mathrm{C}$
ESD protection class 2
Surge protection: 4 kV

## Typical applications

- Integration in outdoor luminaires
- Indoor lighting
- Industrial lighting for:
- Production halls
- Warehouses
- Petrol station lighting
- Lighting for sports facilities

## LED Industrial and Hall Lighting

## WU-M-496 SYM II

## LED Linear Allround Industrial and Hall Lighting

These LED modules are suitable for illuminating industrial, production, sports and warehouse facilifies as well as for petrol stations (especially SYM II).

These Linear Allround modules were designed for built-in into luminaire casings. They enable an easy modular luminaire design with flexibility in system design.

The modules are available in three shapes $(4,8$, or 16 LEDs) and in three white colour tones.

## Technical notes

LED built-in module for integration into luminaires
4,8 or 16 high-efficient High Power LEDs
Allowed operating temperature at $t_{c}$ point

$$
\text { at } I_{\mathrm{F}}=700 \mathrm{~mA}:-20 \text { to } 85^{\circ} \mathrm{C}
$$

Use of external LED constant current driver
Design for optimum thermal management
Efficiency up to $136 \mathrm{~lm} / \mathrm{W}$
Lumen maintenance L70/B 10:
52,000 hrs. (IF 1050 mA ) at $\mathrm{t}_{\mathrm{p}:} 60^{\circ} \mathrm{C}$

## Typical applications

- Integration in outdoor luminaires
- Indoor lighting
- Industrial lighting for:
- Production halls
- Warehouses
- Petrol station lighting
- Lighting for sports facilities

ESD protection class 2
Surge protection: 4 kV

## Optical characteristics

at $t_{p}=60^{\circ} \mathrm{C}$

## LUGA Industrial 2014 10,000 lm

## Built-in lighting modules

These LED modules are suitable for use both in street lighting as well as high-bay and industrial lighting.

## Technical notes

Dimensions ( $\mathrm{L} \times \mathrm{W} \times \mathrm{H}$ ): $64 \times 70 \times 8.7 \mathrm{~mm}$
Push-in terminals (WAGO series 2060)
LED module is operated at high voltage (up to 140 V ).
Safety must be considered acc. EN 60598
Allowed operating temperature at $t_{c}$ point:

$$
-40 \text { to } 85^{\circ} \mathrm{C}
$$

Efficiency up to $150 \mathrm{~lm} / \mathrm{W}$

Colour accuracy initially: 3 SDCM;

$$
\text { after 50,000 hrs. operating time: } 4 \text { SDCM }
$$

NTC-resistor (type: NCP 18XH 103J03RB) for
external driver feedback of module temperature
Lumen maintenance L90/B 10 :
45,000 hrs. (If 700 mA )
Unit: 12 pcs.

## Typical applications

- Integration in outdoor luminaires
- Indoor lighting
- Industrial lighting for:
- Production halls
- Warehouses
- Petrol station lighting
- Lighting for sports facilities

## LUGA C 2015 4000 lm to 15,000 lm

## Built-in lighting modules

LUGA C modules with lumen values ranging from 4000 to 15,000 Im are especially designed as built-in module for industrial and outdoor lighting.

The wide range of variants (CRI 70/80) make
them suitable for indoor as well as for street light
applications.

## Technical notes

Dimensions
DMC11C***E / DMC16C***E: $28 \times 28 \times 1.7 \mathrm{~mm}$ DMC17Q***E: $38 \times 38 \times 1.7 \mathrm{~mm}$
Light emitting surface (LES)
DMC11C***E/DMC16C***E: $\varnothing 22 \mathrm{~mm}$
DMC17Q***E: $\varnothing 33 \mathrm{~mm}$
Allowed operating temperature at tc point:
-40 to $85^{\circ} \mathrm{C}$
-40 to $80^{\circ} \mathrm{C}$ (DMC11C: $>1400 \mathrm{~mA}$ and DMC17Q: > 1700 mA )
-40 to $75^{\circ} \mathrm{C}($ DMC16C: $>1400 \mathrm{~mA})$
Use of external LED constant current driver
Efficiency up to $167 \mathrm{~lm} / \mathrm{W}$
Colour rendering index $\mathrm{Ra}_{\mathrm{a}}:>80 />65$
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Lumen maintenance L90/B 10
DMC11C: 45,000 hrs. (IF 1050 mA )
DMC16C: 42,000 hrs. (IF 1050 mA )
DMC17Q: 59,000 hrs. (If 1050 mA$)$ Unit:

100 pcs. (DMC11C/DMC16C)
75 pcs. (DMC17Q)

## Typical applications

Integration in

- Reflector luminaires
- Flat surface-mounting luminaires
- Downlights
- Indoor and hall lighting
- Industrial lighting for:
- Production halls
- Warehouses
- Petrol station lighting
- Lighting for sports facilities

Constant-current System - Industrial, Hall, Street and Outoor Lighting

## Optics for Street Lighting

## COB silicone optics M-Class (M1)

M-Class silicone optics especially designed and
optimized for the use of COB modules with LES
sizes up to 23 mm . (e.g. LUGA C, DMC11C***E
and DMC 16C***E)
Material: silicone
Optical efficiency: 93\%
Self sealing ability (IP65)
Optimum illumination - installation ratio:
4:1 (pole distance to pole height)
$\begin{array}{ll}\text { Ref. No.: } \mathbf{5 5 9 0 4 2} & \text { optics } \\ \text { Ref. No.: } \mathbf{5 5 8 6 0 7} & \text { support }\end{array}$
$1(\mathrm{~cd} / \mathrm{klm})$

## LED Street and Outdoor Lighting -M-Class, S-Class, <br> Area

These LED modules are suitable for standardcompliant street lighting, paths and squares in accordance with EN 13201.

These modules were designed for built-in into luminaire casings. They enable a modular luminaire design.

The VS ECXd 700/150 W LED driver enables power reduction via phase inversion.

The modules are available in four shapes $(4,16,32$ or 64 LEDs) and in three white colour tones.

## Technical notes

LED built-in module for integration into luminaires
4, 16, 32 or 64 high-efficient High Power LEDs
Allowed operating temperature at $t_{c}$ point

$$
\text { at } I_{F}=700 \mathrm{~mA}:-20 \text { to } 85^{\circ} \mathrm{C}
$$

Use of external LED constant current driver
Design for optimum thermal management
Efficiency up to $136 \mathrm{~lm} / \mathrm{W}$
Colour rendering index $\mathrm{Ra}_{\mathrm{a}}$ : 70 or $>80$
Lumen maintenance L70/B 10 :
52,000 hrs. (IF 1050 mA ) at $t_{p} 60^{\circ} \mathrm{C}$
Surge protection: 4 kV
ESD protection class 2

## Typical Applications

- Integration in luminaires
- Streetlighting for ME- and S-classes (acc. to EN 13201)
- Illumination of public places

## LED Street and Outdoor Lighting -M-Class, S-Class, Area

## Optical Characteristics

at $t_{p}=60^{\circ} \mathrm{C}$

## LED Linear Allround Street \& Outdoor

These LED modules are suitable for standardcompliant street lighting, paths and squares in accordance with EN 13201.

These Linear Allround modules were designed for built-in into luminaire casings. They enable an easy modular luminaire design with flexibility in system design.

## Technical notes

LED built-in module for integration into luminaires 4, 16, 32 or 64 high-efficient High Power LEDs Allowed operating temperature at $t_{c}$ point

$$
\text { at } \mathrm{IF}_{\mathrm{F}}=700 \mathrm{~mA}:-20 \text { to } 85^{\circ} \mathrm{C}
$$

Use of external LED constant current driver
Design for optimum thermal management
efficiency up to $136 \mathrm{~lm} / \mathrm{W}$
Lumen maintenancen L70/B 10 :

$$
\text { 52,000 hrs. (IF } 1050 \mathrm{~mA}) \text { at } t_{p} 60^{\circ} \mathrm{C}
$$

ESD protection class 2
Surge protection: 4 kV

## Typical Applications

## PowerEmitter XP and XML

## Built-in PCB lighting modules

Thanks to the use of highly efficient LEDs, PowerEmitter modules guarantee an extremely high lumen output of up to 731 Im at max. 1050 mA .
The modules can be safely operated with various constant-current converters ( $350 \mathrm{~mA}, 500 \mathrm{~mA}$, $700 \mathrm{~mA}, 1050 \mathrm{~mA})$. Sufficient cooling must be ensured.

Cables have to be soldered onto the solder pads of PowerEmitter modules, which are available in white, neutral white and warm white, to enable terminal connections to be made. The colours of red, green and blue can be made available on request. To enable the creation of unique light solutions, VS also provides PowerOptics attachments with a variety of beam angle characteristics (see pages 87-89).

## Technical notes

PCB diameter: 30 mm
Allowed operating temperature at $t_{c}$ point:
-20 to $60^{\circ} \mathrm{C}$ for luminaires PowerEmitter XP
-20 to $65^{\circ} \mathrm{C}$ for luminaires PowerEmitter XML
Use of external LED constant current driver
FR4-PCB with thermal ducts (PowerEmitter XP)
or aluminium PCB (PowerEmitter XML)
for optimum thermal management
Efficiency up to $132 \mathrm{Im} / \mathrm{W}$
Colour rendering index: white $R_{a}=75$, warm white $R_{a}=80$
ESD protection class 2
Minimum order quantity: 144 pcs.

## TriplePowerEmitter XP

## Built-in PCB lighting modules

Thanks to the use of highly efficient LEDs,
TriplePowerEmitter modules guarantee an extremely high lumen output of up to 622 Im at max. 700 mA .

The modules can be safely operated with various constant-current drivers ( $350 \mathrm{~mA}, 500 \mathrm{~mA}$ or $700 \mathrm{~mA})$. Sufficient cooling must be ensured.

The TriplePowerEmitter modules are available in white, neutral white and warm white.

The modules are available without an optical attachment or with a fixed $10^{\circ}, 20^{\circ}, 30^{\circ}$ or $40^{\circ}$ optical attachment to enable the creation of different lighting scenes.

## Technical notes

PCB diameter: 45 mm
Allowed operating temperature at $t_{c}$ point:

$$
-20 \text { to } 65^{\circ} \mathrm{C}
$$

Use of external LED constant current driver
Aluminium PCB for optimum thermal management
Efficiency up to $109 \mathrm{~lm} / \mathrm{W}$
Colour rendering index:

$$
\text { white } R_{a}=75 \text {, warm white } R_{a}=80
$$

ESD protection class 2
Minimum order quantity: 120 pcs.

## Typical applications

- Integration in luminaires
- Architectural lighting
- Marking paths, stairs, etc.
- Furniture lighting
- Light advertising
- Entertainment, retail lighting

Without optics

## PowerOptics3 for XP/XT Modules

PowerOptics3 were specially developed to supplement VS PowerEmitter making it possible for users to put unique lighting solutions into practice. Use of high-grade optical PMMA enables high efficiency factors of up to $90 \%$.

To guarantee easy mounting on PowerEmitter module, the PowerOptics3 are backed with selfadhesive tape. However, depending on the type of application and ambient conditions, the PowerOptics3 module may require additional fixing to ensure secure mounting

For fixation of PowerOptics3 on Star LED modules use self-tapping screws acc. to
ISO 1481/7049-ST2.9-C/F.

## PowerOptics for XP Modules

Various attachable optics are available for XP modules to enable different beam characteristics and illumination levels.

PowerOptics are made of PMMA, a material of high optical efficiency, and therefore achieve efficiencies of up to $92 \%$.

The optics are available in various beam angles and are easily attached to the modules using self-adhesive tape. Depending on the type of application or the expected ambient conditions, it may be necessary to supplement this method of fastening to ensure the optics are securely mounted.

## PowerOptics for XP Modules

## For TriplePowerEmitter and Spot modules

Various attachable optics are available for
TriplePowerEmitter and the Spot modules of the XP series to enable different beam characteristics and illumination levels.

PowerOptics are made of PMMA, a material of high optical efficiency, and therefore achieve efficiencies of up to $92 \%$

## Thermally <br> Conductive Adhesive Transfer Tapes for LED Modules

## 3M ${ }^{\text {TM }}$ type 8810 and <br> Bergquist Bond-Ply ${ }^{\text {® }} 100$

Thermally Conductive Adhesive Transfer Tapes are designed to provide a preferential heat-transfer path between heat-generating components and heat-sinks or other cooling devices.

These tapes are tacky pressure sensitive adhesives loaded with thermally conductive ceramic fillers that do not require a heat cure cycle to form an excellent bond to many substrates. Only pressure is needed to form an excellent bond and thermal interface.

The specialized chemistry renders them modestly soft and able to wet to many surfaces, allowing them to conform well to non-flat substrates, provide high adhesion, and act as a good thermal interface.

The specialized acrylic chemistry of the tapes provides for excellent thermal stability of the base polymer. The thermally conductive tapes are provided on a silicone treated polyester release liner for ease of handling and die culting. The tapes offer excellent adhesive performance with good wetting and flow onto many substrate surfaces.

Depending on the type of application and/or the expected ambient conditions, the modules must be additionally secured to ensure optimum fixing.

For detailed information and application guidelines see 3 M or Bergquist datasheet for thermally conductive adhesive transfer taper (8805; 8810; 8815; 8820; www.3m.com
or Bergquist Bond-Ply ${ }^{\circledR} 100$; www.bergquistcompany.com).

## LED Modules for Direct Connection to Mains Voltage 220-240 V

## LED MODULES FOR MAINS VOLTAGE <br> RETROFIT UNIT FOR CONVENTIONAL TECHNOLOGIES

## ADVANTAGES OF RECTANGULAR LED MODULES WITH HEAT SINK

- JUST ONE SINGLE UNIT:

LED MODULE, DRIVER AND HEAT SINK

VERY COMPACT SHAPE:
IDENTICAL MOUNTING HOLE LAYOUT AND LAMP FOCUS LIKE FOR CONVENTIONAL BALLAST WITH MOUNTED LAMPHOLDER

- HIGH EFFICENT: POWER FACTOR > 0.9

FOR LUMINAIRES OF PROTECTION CLASS II

LATERAL OR BASE FIXING OPTIONS

CONNECTION WITH PUSH-IN TERMINALS WITH CORD GRIP

## LED MODULES FOR OPERATION AT MAINS VOLTAGE 220-240 V

Luminaires of slim and flat design often provide little or no room for additional control gear. Examples of devices that pose a major design challenge are, in particular, small wall, corridor, hall and ceiling luminaires as well as special applications such as lighting of restaurant menus.

Up to now, incandescent or energy-saving lamps with an Edison base or compact fluorescent lamps with an integrated ballast were often used for such lighting projects. But in line with the ErP Directive, 2-pin-based compact fluorescent lamps are also set to be taken off the EU market with effect from 2017.

## LED Solutions - Made by Vossloh-Schwabe

Vossloh-Schwabe's new 220-240 V LED modules now provide a perfect opportunity to switch to LED well ahead of time - and without requiring any time-consuming or expensive redesign work on already existing luminaires. Refitting existing installations with these LED modules is equally possible - and equally problem-free.

The dimensions of the rectangular model (with an integrated heat sink) and the lamp focus are comparable to the specifications of a magnetic ballast with an integrated lampholder for compact fluorescent lamps. The circular module is particularly suitable for installation in simple luminaire systems that would more usually be fitted with angled Edison lampholders.

## LED Modules for Direct Connection to Mains Voltage 220-240 V

## LEDSpot

## ReadyLine IP

Complete LEDSpot equipped with optics, heat sink, leads and metal frame

## Technical notes

Mains voltage: $220-240 \mathrm{~V}, 50 / 60 \mathrm{~Hz}$
Power factor: > 0.95
Metal frame, round
Heat sink material: thermoconductive resin
For cut-out: $\varnothing 56$ mm
Lens with clear glass
Beam angle: $50^{\circ}$
With leads: Cu tinned, stranded conductors $0.5 \mathrm{~mm}^{2}$,
double FEP/FEP-insulation
MOV - metal-oxide varistor, enclosed
Protection class II
RFI suppressed
Degree of protection: IP54/IP20
Unit: 45 pcs.

## LEDSpot

## ReadyLine MR 16

Complete LEDSpot equipped with optics,

## heat sink and leads

## Technical notes

Mains voltage: 220-240 V, 50/60 Hz
Power factor: > 0.95

Lens diameter: 50 mm
Beam angle: $42^{\circ}$
Heat sink material: aluminium
Leads: Cu tinned, stranded conductors $0.5 \mathrm{~mm}^{2}$,
double FEP/FEP-insulation, length: 300 mm
MOV - metal-oxide varistor, enclosed unassembled
Protection class II

$42^{\circ}$
RFI suppressed
Unit: 30 pcs.

## LED Modules for Direct Connection to Mains Voltage 220-240 V

## ReadyLine S

Built-in LED modules with integrated driver for mains voltage

## Technical notes

Mains voltage: 220-240 V, 50/60 Hz
Power factor: > 0.97
Dimensions:

$$
\begin{array}{ll}
\text { with heat sink } & 155 \times 41 \times 32 \mathrm{~mm} \\
\text { without heat sink } & 132 \times 37.4 \times 9.2 \mathrm{~mm}
\end{array}
$$

Aluminium PCB for optimum thermal management
Heat sink made of thermoconductive resin
Protection cover: PC, UV-glued
or rivetted (module with heat sink)
Push-in terminals with push-button:

$$
0.2-0.75 \mathrm{~mm}^{2}(24-18 \mathrm{AWG})
$$

Fixation for modules
with heat sink: fixing holes for screws M4 or self-tapping screws 3.9
with cover: fixing holes for screws M3 or self-tapping screws 2.9
For luminaires of protection class II

RFI suppressed
Weight: 35/140 g (without/with heat sink)
Unit: 80/40 pcs. (without/with heat sink)

## Typical applications

- Integration in luminaires
- Residential lighting
- Architectural lighting
- Retail lighting
- Furniture lighting

## LED-Module

## ReadyLine DL

Built-in LED modules with integrated driver for mains voltage

## Technical notes

LED built-in module for luminaires
Mains voltage: $220-240 \mathrm{~V}, 50-60 \mathrm{~Hz}$
Power factor: > 0.9
Dimensions: $\varnothing 164$ mm
Allowed operating temperature at $t_{c}$ point

$$
-25 \text { to } 80^{\circ} \mathrm{C}
$$

Ambient temperature range ta: -25 to $65^{\circ} \mathrm{C}$
Lumen maintenance L70/B50:
55,000 hrs. at $t_{p} 80^{\circ} \mathrm{C}$
Unit: 36 pcs.

## Typical applications

- Downlights
- Replacement for compact fluorescent lamps

| Max. output W | Type | Ref. No. | $\begin{aligned} & \text { Voltage AC } \\ & 50-60 \mathrm{~Hz} \\ & \mathrm{~V} \end{aligned}$ | Colour | Correlated colour temperature K | Typ. ## DOWNLIGHTS

## PRO SERIES / PRIME SERIES

## ADVANTAGES OF VS LED DOWNLIGHTS

## LED Recessed Mounted Downlight

The integration of solid state lighting technology to conventional down light provides optimal light distribution and extended lifetime, all at an affordable price. LED downlights are fully compatible with existing conventional downlight infrastructure, and are the perfect choice for both new and replacement markets.

## - PRO SERIES

- Slim design for easy installation in low false ceiling
- Integrated driver, direct connection to mains without additional connectors and/or junction box
- Dimmable with regular phase-cut dimmer (Pro Series)
- Tunable white-option to regulate white colour temperature by simple switch of the mains via wall switch (Pro Tune Series)

## - PRIME SERIES

- Very high efficiency of up to $100 \mathrm{~lm} / \mathrm{W}$
- Slim design for easy installation in low false ceiling
- High CRI $\geq 90$
- Dimmable with external dimmable drivers

## Pro Series

## 12 W / 18 W

Advanced dimmable design (Pro Series) or tunable white function (Pro Tune Series) Voltage supply: 220-240 V AC
Integrated driver for direct connection to mains Allowed operating temperature: -10 to $50^{\circ} \mathrm{C}$ Allowed storage temperature: -10 to $50^{\circ} \mathrm{C}$ Screw terminals: $2.5 \mathrm{~mm}^{2}$
Quantity of screw terminals: $1 \times 2$-poles primary

## Protection class II

SELV
Degree of protection: IP20
Service life time: > 35,000 hours (L50)

## Pro 12 W

## Pro 18 W

Pro 12 W

Pro 18 W

Pro Tune 12 W

## DECOLED

## A NEW GENERATION OF DECORATION

## DECOLED - ECO-FRIENDLY LIGHTING FOR INDOOR APPLICATIONS

DecoLED, a highly efficient LED downlight, is the perfect solution for commercial and residential applications. The die-cast casing is fitted with an easy adjustment function that allows the light to be positioned at the desirable angle. The adaptable spring clip makes installation quick, easy and hassle-free, and is suitable for all types of ceiling.

The reflector design of DecoLED 7 W is a perfect 50 W dichroic halogen retrofit. This results in an energy saving of more than $87 \%$ and reduces $\mathrm{CO}_{2}$ emissions, all of which makes DecoLED the more environmentally sustainable option.

VS DecoLED comes in different beam angles, wattages and white colours to suit any application.

Going greener has never been easier - for further energy-efficient and highly eco-friendly lighting options, VS provides a full range of LED modules to suit your every need.

## Typical applications

- Commercial lighting
- Showcase lighting
- Bathroom and kitchen lighting
- Residential lighting
- Entertainment lighting

## VS DecoLED

A slim and compact design with integrated thermal management and high-efficiency output, making it ideal for many lighting applications.

Allowed operating temperature: -20 to $40^{\circ} \mathrm{C}$
Allowed storage temperature: -40 to $60^{\circ} \mathrm{C}$
Dimmable (dimmable LED drivers see from
page 163 on)

## Protection class III

Degree of protection: IP20
Service life time: > 35,000 hrs (L50)

## DecoLED, 7 W

Design style: reflector
Current supply: 350 mA DC
Beam angle: $36^{\circ}$
Adjustable angle: 0 to $30^{\circ}$

## LED Constant Current Drivers

[^33]
## LEDSpots for Retail, Residential and Furniture Lighting

## FOR RETAIL, RESIDENTIAL AND FURNITURE LIGHTING

## CONVENIENT LED TECHNOLOGY

As the perfect replacement for halogen lamps, the new LED modules made by VS are ideal for use in furniture, false ceilings as well as cooker hoods.

These LED modules are available with high-power LEDs and different optics attachments. The circular or square metal frame is available in a white, silver, Diffuse silver or gold finish. Furthermore, flexible snap-in fasteners make it extremely easy and quick to exchange halogen spots, which are still in widespread use.

The package is rounded off by a matching LED drivers housed in a compact casing plus a set of cables with preassembled plugs for connecting up to two LED modules.

## Typical applications for LEDSpots

- Replacement of more common lamps (AR 111, MR 16, MR 11 )
- Integration in luminaires (except PRO series)
- Retail lighting
- Marking paths, stairs, etc.
- Furniture lighting (IP54 version for humid rooms)
- Light advertising
- Entertainment

The specifications contained in this catalogue can change due to technical innovations. Any such changes will be made without separate notification.

Please read the safety and installation instructions on the individual products as well as further technical information provided in the extensive product descriptions at
www.vossloh-schwabe.com.

## LEDSpots at a Glance

The use of LEDs offers many advantages in comparison to conventional lighting solutions.

## ShopLine Series

- Replacement for HID lamps 20-100 W
- Built-in spot with heat sink based on LUGA modules
- Reflector for homogeneous light distribution

## Complete LEDSpots with Frame

- Replacement for Halogen lamps 20-35 W
- Flat LED spot with heat sink and frame based on COB or SMD modules
- For built-in into ceilings or metal sheets

## LEDSpots for Retail Lighting - HID Replacement

## ShopLine 111

Built-in LEDSpot equipped with a reflector, heat sink, leads and optional plug

- Replacement for AR 111

## Technical notes

Reflector: $\varnothing 11 \mathrm{~mm}$
Heat sink material: aluminium
Allowed operating temperature at tp point:

$$
65^{\circ} \mathrm{C}(\mathrm{~L} 90 / \mathrm{B} 10)
$$

Max operating temperature tc: $85^{\circ} \mathrm{C}$
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Use of external LED constant-current drivers required
The ceramic PCB ensures optimum thermal
management
Fixation
reflector: front and back of rim
heat sink: lateral fixation with M5 screws and
nuts or rear side fixation with tapping screws ST2.9
Plastic clear cover to protect reflector
(opaque cover on request)
Leads: Cu tinned, stranded conductors $0.5 \mathrm{~mm}^{2}$,
FEP-insulation and neoprene sleeve, length: 600 mm
With integrated cord grip
Unit: 6 pcs.

## ShopLine NEXT 111

Built-in LEDSpot equipped with a interchangeable reflector, heat sink and leads

## - Replacement for AR 111

## Technical notes

Reflector: $\varnothing 111 \mathrm{~mm}$
Heat sink material: aluminium
Allowed operating temperature at tp point:

$$
65^{\circ} \mathrm{C}(\mathrm{L90} / \mathrm{B} 10)
$$

Max operating temperature tc: $85^{\circ} \mathrm{C}$
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Use of external LED constant-current drivers required
The ceramic PCB ensures optimum thermal
management
Plastic clear cover to protect reflector
(opaque cover on request)
Fixation
reflector: front rim
heat sink: lateral fixation with M5 screws and
nuts or rear side fixation with tapping screws ST2.9 Leads: Cu tinned, stranded conductors $0.5 \mathrm{~mm}^{2}$,

FEP-insulation and neoprene sleeve, length: 300 mm
With integrated cord grip
Unit: 6 pcs.

## LEDSpots for Retail Lighting - HID Replacement

## ShopLine EVO90

## Built-in LEDSpot equipped with a reflector,

 heat sink and leads
## Technical notes

Reflector: $\varnothing 90 \mathrm{~mm}$, aluminium, bayonet fixing
Holder: PBT, inner ring: metallized
Heat sink material: aluminium
Allowed operating temperature at $t_{p}$ point:
-25 to $85^{\circ} \mathrm{C}$
DMC 125 (L90/B 10; 40,000 hrs)
DMC 128 (L90/B 10; 50,000 hrs)
Colour accuracy initially: 3 SDCM;
after 50,000 hrs. operating time: 4 SDCM
Use of external LED constant-current drivers required
The ceramic PCB ensures optimum thermal
management
Fixation
heat sink: lateral fixation with M5 screws and
nuts or rear side fixation with tapping screws ST2.9
Leads: Cu tinned, stranded conductors $0.5 \mathrm{~mm}^{2}$,
FEP-insulation and neoprene sleeve, length: 350 mm
With integrated cord grip
Weight: 360 g
Unit: 6 pcs.

## Reflectors for ShopLine EVO90

Reflectors made of aluminium with bayonet fixation Surface: anodised, Weight: 27 g, Unit: 30 pcs.

| Ref. No. | Beam characteristic | Beam angle |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: |
| Reflectors D90 H50 |  |  |  |  |  | DMC125 | DMS088 | DMS 128 |
| $\mathbf{5 5 7 3 5 9}$ | narrow | $12^{\circ}$ | $14^{\circ}$ | $18^{\circ}$ |  |  |  |  |
| $\mathbf{5 5 7 3 6 0}$ | medium | $22^{\circ}$ | $26^{\circ}$ | $26^{\circ}$ |  |  |  |  |
| $\mathbf{5 5 7 3 6 1}$ | wide | $32^{\circ}$ | $36^{\circ}$ | $36^{\circ}$ |  |  |  |  |

## Usage and maintenance

If necessary clean reflectors with mild soap, water and soft cloth.
Never use any commercial cleaning solvents on reflectors, like alcohol.
Please handle or install reflectors with wearing gloves, skin oils may damage reflector or its optical characteristic.

## LEDSpots for Residential and Furniture Lighting - Halogen Replacement

## LEDSpots

Complete LEDSpot equipped with optics, heat sink, leads and frame

## LEDSpot IPLine

Metal frame, round
For cut-out: $\varnothing 56 \mathrm{~mm}$
Degree of protection: IP54

## LEDSpot SmartLine COB / XT

Metal frame, round or square
For cut-out: $\varnothing 56$ mm
Degree of protection: IP40

## LEDSpot StartLine

Resin or steel frame, round
For cut-out: $\varnothing 56 \mathrm{~mm}$
Degree of protection: IP20

## Surface Kit with Mounted LEDSpot

Plastic frame to use IPLine, SmartLine or Startline
as surface mounting spots
Dimensions $(\varnothing \times H)$ : $\varnothing 67 \times 30 \mathrm{~mm}$
Degree of protection: IP20

## LEDSpot DiscLine

Metal frame, round
For cut-out: $\varnothing 56 \mathrm{~mm}$
Degree of protection: IP40

## LEDSpot EffectLine

Metal frame, round or square
For cut-out: $\varnothing 37$ mm
Degree of protection: IP20

## LEDSpot Sets

On request, you will receive complete sets that
contain the desired number of LEDSpots, a respective
number of cable sets and the required LED drivers.

## Lead sets for LEDSpots

Lead sets with connector for easy and fast connection.

## LEDSpots for Residential and Furniture Lighting - Halogen Replacement

## LEDSpot IPLine

Complete LEDSpot IP54 equipped with optics, heat sink, leads and metal frame

## Technical notes

Metal frame, round
For cut-out: $\varnothing 56$ mm
LEDSpot with one LED and with thermoplastic heat sink
Reflector with clear glass (opaque glass on request)
Beam angle: $30^{\circ}$ or $50^{\circ}$ (XTE), $40^{\circ}$ (COB)
Leads: Cu tinned, stranded conductors AWG22,
PVC-insulation, length: 250 mm
Use of external LED constant-current drivers required
Snap-in clips for easy installation

## Degree of protection: IP54

Unit: 45 pcs.

## LEDSpots for Residential and Furniture Lighting - Halogen Replacement

## LEDSpot SmartLine XT

## Complete LEDSpot equipped with optics,

 heat sink, leads and metal frame
## Technical notes

Metal frame, round or square
For cut-out: $\varnothing 56$ mm
LEDSpot with one LED and with thermoplastic heat sink
Beam angle: $50^{\circ}$
Leads: Cu tinned, stranded conductors AWG22

$$
\text { PVC-insulation, length: } 250 \text { mm }
$$

Use of external LED constant-current drivers required Snap-in clips for easy installation
for luminaire sheets (type LCH-002 and -008)
for ceilings (type LCH-004 and -009)
Degree of protection: IP40
Unit:
90 pcs. (type LCH-002 and -008),
40 pcs. (type LCH-004 and -009)

## LEDLINE ECX

## ELECTRONIC CONSTANT CURRENT DRIVERS

## LED CONSTANT CURRENT DRIVERS

## Electronic converters for LED modules operated with constant current LED drivers

To ensure the safe operation of LEDs that are wired in series, the operating current must be limited to a constant value by the LED driver.

Light-emitting diodes are semiconductor devices with a light-emitting p-n junction. Due to the specific diode characteristics, the current can only flow through an LED in one direction. Coupled with the special properties of a semiconductor, this non-linear behaviour can increase the current and power uptake of an LED as it heats up.

If this effect is not limited, uncontrolled heating can finally destroy the semiconductor junction. For this reason, VS recommends using an external constant current driver to operate all constant current driven LED modules. To ensure that the same current flows through every LED, constant current driven LED modules can only be wired in series.

The constant current source has to be selected to suit the respective application, i.e. it must supply the required current and also provide sufficient voltage for the LED string.

The number of VS LED modules that can be connected to a single operating device is dependent on the forward voltage of the respective modules.

## LEDLine ECX

- OVERLOAD PROTECTION

■ SHORT CIRCUITING PROTECTION

- SELV OR SELV EQUIVALENT

## Product Classification and Overview of LED Drivers

The electronic constant current drivers are optimised to operate constant current driven LED modules. Before connecting LED modules ensure that the power supply is disconnected from mains.

Most converters are designed for DC-operation (mains frequency: OHz ) and can be used for emergency power supplies.

| iProgrammer | Ref. No. 186428 | The iProgrammer is | signed to let you contig | LED drivers u | the 3C function. |  |  | 182 |

## PrimeLine LED Drivers <br> - with Selectable Current

350-700 mA,
max. 42 W and max. 84 W
The linear LED constant-current drivers are designed for use in office and retail lighting.

## Electrical characteristics

Secondary side switching of LED modules is not allowed.
Power factor at full load: 0.97
Stand-by losses: < 0.5 W

## Dimming

The dimming function is achieved by applying
a PWM signal to the nominal current.
Dimming range: 3 to $100 \%$.
If no dimming interface is connected, brightness
will stay at $100 \%$.

## Programmability

The output current can be freely adjusted
in 1 mA steps between 350 mA and 700 mA (factory setting: 350 mA ).
An iProgrammer (Ref. No. 186428) and
a PC running the respective VS software are required for programming purposes.

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
Push-in terminals: $0.2-1.5 \mathrm{~mm}^{2}$

## Safety features

Electronic short-circuit protection
Overtemperature protection
Protection against "no load" operation
Degree of protection: IP20
Protection class I

## ComfortLine LED

Drivers - Dimmable

## $2 \times 700 \mathrm{~mA} / \max .2 \times 70 \mathrm{~W}$

The linear LED constant-current drivers are designed
for use in office and retail lighting

## Electrical characteristics

Secondary side switching of LED modules is not allowed.
Power factor at full load: 0.95
Stand-by losses: < 0.5 W

## Dimming

The dimming function is achieved by applying a PWM signal to the nominal current.
Dimming range: 3 to 100\%.
If no dimming interface is connected, brightness will stay at $100 \%$.

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
DC operation: 198-264 V DC, 0 Hz
(can be reduced to 176 V with reduced
service life time)
Push-in terminals: 0.2-1.5 mm²

## Safety features

Expected service life time
at operation temperatures at $t_{c}$ point

Electronic short-circuit protection
Overload and overtemperature protection
Protection against "no load" operation
Degree of protection: IP20
Protection class I
SELV

## PrimeLine LED Drivers - with Selectable Current

350-700 mA / max. 24 W and max. 37 W
Compact casing shape with integrated cord grip optional for built-in or independent operation.

## Electrical characteristics

Secondary side switching of LED modules is allowed (hot wiring).
Power factor at full load: > 0.9
Stand-by losses: $<0.5 \mathrm{~W}$

## Dimming

The dimming function is achieved by applying a PWM signal to the nominal current.
Dimming range: 1 to $100 \%$.
If no dimming interface is connected, brightness will stay at $100 \%$.

## Programmability

The output current can be freely adjusted in 1 mA steps between 350 mA and 700 mA (factory setting: 350 mA ). An iProgrammer (Ref. No. 186428) and a PC running the respective VS software are required for programming purposes.

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
DC operation: 198-264 V DC, 0 Hz
(can be reduced to 176 V with reduced
service life time)
With integrated through-wiring

## Comfortline LED

Drivers - Dimmable

## 700 mA / max. 24 W

Compact casing shape with integrated cord grip optional for built-in or independent operation.

## Electrical characteristics

Secondary side switching of LED modules is allowed (hot wiring).
Power factor at full load: > 0.9

## Dimming

The dimming function is achieved by applying
a PWM signal to the nominal current.
Dimming range: 1 to $100 \%$.
If no dimming interface is connected, brightness will stay at $100 \%$.

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
DC operation: 198-264 V DC, 0 Hz
(can be reduced to 176 V with reduced
service life time)
With integrated through-wiring
Push-in terminals: $0.2-1.5 \mathrm{~mm}^{2}$

## Safety features

Electronic short-circuit protection
Overload and overtemperature protection
Protection against "no load" operation
Degree of protection: IP20
Protection class II
SELV

## Expected service life time

## PrimeLine LED Drivers <br> - Dimmable

700, 1000, $1400 \mathrm{~mA} / \max .90 \mathrm{~W}$
The nominal current can be set to 700 mA , $1000 \mathrm{~mA}, 1400 \mathrm{~mA}$ with a dip switch
or it can be adjusted with a DALI signal.

## Electrical characteristics

Secondary side switching of LED modules
is allowed (hot wiring).
Power factor at full load: > 0.98

## Dimming

The dimming function is achieved by applying a PWM signal to the nominal current.
Dimming range: 10 to $100 \%$.
If no dimming interface is connected, brightness will stay at $100 \%$.

## MidNight - Multi-Step dimming

The MidNight concept is based on dimmable ballasts for integration in lampposts; these ballasts can be programmed to create different light scenes with different dimm settings.

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
Push-in terminals: 0.75-2.5 $\mathrm{mm}^{2}$

## Safety features

Protection against transient main peaks up to 2 kV (between L and N ) and

## ComfortLine LED

Drivers - Dimmable

## 1050 mA / max. 60 W

These electronic LED constant current drivers are especially designed for use in street lighting systems.

## Electrical characteristics

Secondary side switching of LED modules is not allowed.
Power factor at full load: > 0.96

## Dimming

The dimming function is achieved by applying an analogue dimming signal to the nominal current. Dimming range: 10 to $100 \%$.
If no dimming interface is connected, brightness will stay at $100 \%$.

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
Pre-assembled connection leads:
primary: $2 \times 0.75 \mathrm{~mm}^{2}$, length: 300 mm
secondary: $6 \times 0.75 \mathrm{~mm}^{2}$, length: 300 mm

## Safety features

Protection against transient main peaks up to 4 kV (between L and N)

## ComfortLine

## LED Drivers - for

 Power Reduction
## 700/400 mA / max. 150 W

These electronic LED constant current drivers are especially designed for use in street lighting systems. They provide a simple power-reduction option by connecting a further phase, which makes it possible to switch between 700 mA and 400 mA .

## Electrical characteristics

Secondary side switching of LED modules is not allowed.
Power factor at full load: > 0.95

## Power reduction

The nominal current output will be reduced by connecting the control phase (LST)
 to $57 \%$.
Connecting L (black) and LST (orange) to the mains voltage reduces output by lowering the output current. If this function is not used, an additional terminal should be provided in the luminaire to fix the LST wire.

## Connection details

Mains voltage: $220-277 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
K37: Push-in terminals: $0.75-2.5 \mathrm{~mm}^{2}$
K37 with cord grip:
Pre-assembled connection leads:
primary: $5 \times 1 \mathrm{~mm}^{2}, 200 \mathrm{~mm}$ secondary: $2 \times 1.5 \mathrm{~mm}^{2}, 200 \mathrm{~mm}$
Suitable for independent operation when capable connector acc. to EN 60598 is used.

## Safety features

Protection against transient main peaks up to 3 kV (between L and N ) and

up to 4 kV (between L, N and PE)
Electronic short-circuit protection
Overload and overtemperature protection

## LED Constant Current Drivers - Industry

## ComfortLine LED Drivers

## 700 mA / max. 112 W <br> 1050 mA / max. 126 W

These electronic LED constant current drivers are designed for use in industrial hall lighting systems

## Electrical characteristics

Secondary side switching of LED modules
is not allowed.
Power factor at full load: > 0.95

## Connection details

Mains voltage: 220-240 V $\pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
DC operation: 198-264 V DC, 0 Hz
(can be reduced to 176 V with reduced service life time)
Push-in terminals: 0.2-1.5 mm²

## Safety features

Electronic short-circuit protection
Overload and overtemperature protection
Protection against "no load" operation
Degree of protection: IP20

Protection class I
The LEDs are thermally protected by the driver's NTC interface, which ensures the current will be reduced when a critical temperature is reached.

## LED Constant Current Drivers - Accessories

## iProgrammer

## For programming LED drivers

The iProgrammer is designed to let you configure LED drivers using the 3C function.

Using DALI commands, the iProgrammer enables various functions to be configured on all VS LED drivers that feature the " 3 C " symbol.
As an example, not only can the current be set to a precise level, but programming functions for the street lighting zone can also be transferred.
Please refer to the manual at
www.vossloh-schwabe.com/en/home/products/
led-light-engines-and-modules/led-control-gears/ constant-current.html for detailed configuration procedures.

## Technical notes

Configuration interface: DALI
Ambient temperature ta: 5 to $50^{\circ} \mathrm{C}$
Push-in terminals: 0.2-1.5 mm²

K3.2

Degree of protection: IP20

## Connections

- Mains connection: 220-240 V AC/50-60 Hz
- Max. power consumption: 5 W
- USB 2.0

## Software download

## OPTIMISED LUMINAIRE PROTECTION

## LUMINAIRE PROTECTION AND POWER ADJUSTMENT

This chapter presents inrush current limiters, electronic components to protect luminaires against mains surges, power reduction products and components with which the output current of LED drivers can be adjusted.

## Luminaire Protection Device

## For electronic devices

When electronic components form part of lighting systems, it is often necessary to protect such components against power-supply interruptions and electric overloads (power surges).

## SP 230/10 K

Suitable for luminaires of protection class I and II
Dimensions: $32 \times 22 \times 13 \mathrm{~mm}$
Weight: 20 g
Connecting: solid wire, length: 50 mm
Ref. No.: 147230

## SPC 230/10 K

If the protective luminaire component overloads, the connected lighting circuit will be interrupted. This cut-out function makes it easier to detect the end of life of the protective component, facilitates quick replacement by maintenance staff and provides reliable protection for lighting components.
Suitable for luminaires of protection class I
Type 3 product
Dimensions: $53 \times 28 \times 27 \mathrm{~mm}$
Weight: 50 g
Screw terminals: 0.5-1.5 mm²

## Ref. No.: 142736

## SP 3/230/10 K

Suitable for luminaires of protection class I
Type 3 product
Dimensions: $\varnothing 36 \times 75 \mathrm{~mm}$
Weight: 60 g
Screw terminals: 0.75-4 mm²
Ref. No.: 147233

These can be caused by switching inductive loads or by The protection unit reduces overatmospheric discharges such as lightning striking the mains or the ground. A further cause can be induced voltages from neighbouring cables when working with leading-edge phase-cutting controls.

voltages at the connection terminals of electronic components. The remaining residual voltage is then reduced to a respective protective level, based on the discharge current (see diagram below).

| Type | Ref. No. | Voltage $\begin{aligned} & 50 / 60 \mathrm{~Hz} \\ & \mathrm{~V} \pm 10 \% \end{aligned}$ | Max. load current A | Max. impulse voltage Uoc (V) | Discharge current ( $8 / 20 \mu \mathrm{~s}$ ) |  | Protection level at discharge current of 1000 A | Safety <br> max. ## Luminaire Protection Device

## For electronic devices

These protective components are fitted with an
LED indicator. Once the end of the component's life
has been reached, the LED goes out and the
protective component has to be replaced.

## SPC 230/10 K/i

Suitable for luminaires of protection class II
Type 3 product
Dimensions: $74 \times 24 \times 27 \mathrm{~mm}$
Weight: 100 g
Screw terminals: 0.5-2.5 mm²
Ref. No.: 142737

## SP 3/230/10 K/i

Suitable for luminaires of protection class I
Type 3 product
Dimensions: $128 \times 37 \times 28 \mathrm{~mm}$
Weight: 61 g
Screw terminals: 0.5-2.5 $\mathrm{mm}^{2}$

## Inrush Current Limiter ESB-6K

## Limits capacitive inrush currents of electronic ballasts and converters for LED modules

Due to their capacitive nature, these products generate high inrush currents. By temporarily activating a limiting resistor, the inrush current is reduced to an uncritical value (see graph below).

Several LED drivers or electronic ballasts can be connected downstream under consideration of the maximum permissible continuous current of the inrush current limiter.

The device thus prevents any automatic circuit breakers from being triggered or any damage from being caused to upstream relay contacts.

## Wiring

## ESB-6K

Casing: PC
Dimensions ( $\mathrm{a} \times \mathrm{b} \times \mathrm{c}$ ): $55 \times 28 \times 27 \mathrm{~mm}$

## Example using a 150 W LED driver

Brown: with ICL (ESB)
Blue: without ICL (ESB)
$1 \mathrm{~V}=1 \mathrm{~A}$

## Power Switch PS 16 K

## For electronic LED drivers

Given centralised control of an LED driver's 230 V power switch terminals, the existing cable capacities of the control line can lead to switching errors.
This can be prevented by installing a PS 16 K power switch, which features a potential-free and galvanically isolated switching contact.

The PS 16 K power switch complies with EN 61347 and is also suitable for use in luminaires of protection class I and II.

The power switch complies with the specification of DIN EN 61347.

## PS 16 K

Casing: PC
Dimensions (axbxc): $74 \times 34 \times 27 \mathrm{~mm}$
Weight: 100 g
Screw terminals: 0.75-2.5 mm²

Ref. No.: 142185

## Automatical Power Switch

## for LED Drivers - PR 12 K LC

The PR 12 K LC can be used for power switching of LED drivers with respective interface.
A control phase is not needed.
Once it's connected to the mains supply voltage
the power switch will switch automatically.

The power switch complies with the specification of DIN EN 61347 and is suitable for the application in luminaires of protection class I and II.

## PR 12 K LC

Casing: PC
Dimensions (axbxc): $76 \times 34 \times 30 \mathrm{~mm}$
Weight: 100 g
Screw terminals: 0.75-2.5 mm²
Ref. No.: 142170

## Wiring diagram

For example with VS LED drivers ECXd 700.023 (Ref. No. 186202 or 186203 )

## Programmable Power Switch for LED Drivers - PR 12 KD

For power reduction purposes, the PR 12 KD power switch can be used, which addresses the LED driver's 230 V power reduction input.
A control phase is not needed.
The constant switching-time is selectable.
The left side of the rotary switch is used for reset to full power after eleven hours; the right side is for continuous power reduction after programmed time has been reached.

The power switch complies with the specification of DIN EN 61347 and is suitable for the application in luminaires of protection class I and II.

## PR 12 KD

Casing: PC
Dimensions ( $\mathrm{a} \times \mathrm{b} \times \mathrm{c}$ ): $76 \times 34 \times 30 \mathrm{~mm}$
Weight : 100 g
Screw terminals: 0.75-2.5 mm²

## Wiring diagram

[^42]
## Switch Units for Electronic Operating Devices with 1-10 V Interface

Vossloh-Schwabe's switch units are designed to enable one-step power reduction of lamps (FL, CFL, LED, HS, HI and C-HII with the help of the respective electronic ballast or converter.

To this end, the switch units utilises the $1-10 \mathrm{~V}$ interface of the control gear unit. The switch unit is mainly intended for outdoor luminaires in systems with or without a control phase.

Shape: $56 \times 28 \times 27 \mathrm{~mm}$
Casing: PC
Screw terminals: 0.75-2.5 mm²
Max. permissible casing temperature $t_{c}: 80^{\circ} \mathrm{C}$ Min. permissible ambient temperature $t_{a}:-30^{\circ} \mathrm{C}$ Fastening: plastic male nipple with pre-assembled washer and nut

Power reduction SU 1-10 V K for lighting systems featuring an $\mathbf{L}_{\mathbf{S T}}$ control phase
The switch unit employs a positive switching to reduce power, i.e. power is reduced when the control phase is switched off $\left(L_{S T}=0 \mathrm{~V}\right)$.
The $1-10 \mathrm{~V}$ interface of the electronic ballast is addressed at the moment that power reduction is effected.

## Power reduction PR 1-10 V K LC for

 lighting systems without a control phaseThis switch unit can be used to effect power reduction in lighting systems that do not feature a control phase.

The $1-10 \mathrm{~V}$ interface is addressed on the basis of the fundamental operating principle used by VosslohSchwabe's PR 12 K LC power switch (details of which can be made available on request). This power switch is capable of determining the starting time of reduced-power operation over the measured operating time of a lighting system. As a result, it is no longer necessary to spend valuable time modifying the power-reduction unit to suit the continually changing day-night cycle; changing the clocks in line with daylight saving measures in the summer and winter is equally unnecessary. The $1-10 \mathrm{~V}$ interface of the electronic ballast is addressed as soon as the system is switched to reduced power.

Circuit diagram PR 1-10 V K LC

## Circuit diagram SU 1-10 V K

## Resistor Network for LED Drivers

This resistor network is used to adjust the output currents of LED drivers. 255 different resistance values can be adjusted in 10-Ohm steps within a range from 0 to 2550 Ohm by connecting the SU $1-10 \mathrm{~V}$ K and PR 1-10 V LC power switches. As an example, this makes it possible to even out differences in luminous
flux common to LED luminaires.

The component is designed for use in protection class II luminaires.

## R 10-1280

Casing: PC
Dimensions: $32 \times 25 \times 15 \mathrm{~mm}$
Weight: 20 g

Connection leads, solid: $0,5 \mathrm{~mm}^{2}$
Lead length: 50 mm
Ref. No.: 149800

## LED COMPONENTS <br> FOR 24 V SYSTEMS

With its high-power 24 V system, Vossloh-Schwabe is responding to the trend towards market harmonisation and simplification of LED control technology.

The modules are operated at 24 V DC and constant-current control of 350 mA min. is effected on the circuit board. The module is connected using on-board push-in terminals and matching connecting cables. This enables modular and highly flexible LED systems.

The RGB system is based on the "common anode" principle. The DigiLED CA series permits the operation of high-power RGB modules and low-power modules of "common anode" design.

## Typical applications

- General lighting
- Architectural lighting
- Lighting of complex structures
- Entertainment
- Shop design

The specifications contained in this catalogue can change due to technical innovations. Any such changes will be made without separate notification.

Please read the safety and installation instructions on the individual products as well as further technical information provided in the extensive product descriptions at
www.vossloh-schwabe.com.

## LED PROFILE

## LEDProfile IP67

Light modules for IP67-compliant outdoor lighting

Vossloh-Schwabe provides an IP67-compliant encapsulation for LED frames destined for outdoor lighting projects (e.g. architectural lighting).
on request, these frames can be fitted and encapsulated with flexible modules (WU-M-456). Depending on the respective LED module, the length of the frame can be extended by several times the by the length of the LED module ( 100 mm ). The maximum frame length is 2 m .

The LED arrays can be supplied in white, warm white or RGB.

Please contact your VS sales representative for further details.

## High Power 24 V CA <br> Modules <br> White and RGB

## Built-in PCB lighting modules

The High Power 24 V CA modules are available in white and warm white or RGB with a very high luminous flux.

The round design with 3 or 10 High Power LEDs is particularly suitable for installation in luminaires and spots. The linear design with 6 LEDs is, for instance, suitable for wall-washing and linear luminaires, etc.

To enable easy understanding of the system, the modules are operated at 24 V DC. Constant-current control of the LEDs is on the circuit board. Contacts are made using an on-board push terminal with matching connection cables.

Additional suitable dimming modules (DigiLED CA series) and optics attachments (see pages 86-88) are available to create individual lighting solutions.

## Technical notes

Triple WU-M-440: $\varnothing 66$ mm, 3 LEDs Line WU-M-441: $300 \times 26 \mathrm{~mm}, 6$ of LEDs
Flood WU-M-442: $\varnothing 110 \mathrm{~mm}$, 10 of LEDs
Allowed operating temperature at $t_{c}$ point:

$$
-10 \text { to } 85^{\circ} \mathrm{C}
$$

Aluminium PCB
For improved thermal management VS recommends an additional cooling element, which is suitable for the application.
Colour rendering index: > 80
Increased ESD protection
Voltage supply: 24 V
Unit: 50 pcs.

## LEDLine Flex SMD Professional Indoor White

## Built-in PCB lighting modules

The LEDLine Flex SMD Professional Indoor is fitted with SMD LEDs on a flexible printed circuit board of only approx. 0.4 mm thickness. Even the most complex structures can be illuminated thanks to the use of an extremely pliable foil. LEDLine Flex SMD Professional Indoor can be separated into segments of 100 mm lengths without loss of function. This product is available in a continuous length of up to 10 m . Installation is achieved via double-sided adhesive tape affixed to the rear of the PCB.

## Technical notes

## Colour Control Modules - DigiLED CA

The DigiLED CA series is based on a system design that combines simplicity, flexibility and reliability. The DigiLED CA series is suitable for operating both highpower RGB CA modules and low-power RGB CA modules.
In the simplest case, a keypad enables manual colour control. In addition to custom colour control, it is also possible to call up pre-set colour programs for example colour sequences.

## Technical notes

Dimensions: $93 \times 58 \times 29 \mathrm{~mm}$
Ambient temperature ta: 0 to $45^{\circ} \mathrm{C}$
Operating voltage: 24 V
Max. current on the supply line: 5 A
Push-in terminals: $0.25-1.5 \mathrm{~mm}^{2}$,
grid: 3.5 mm
All DigiLED not suitable for the US market

## DigiLED Manual CA

Colour controls via key pads (6 keys) Individual colour control or selection of
pre-set programs
$\mathrm{t}_{\mathrm{c}}=55^{\circ} \mathrm{C}$ max.
Max. current per control channel: 1.25 A
Type: WU-ST-001-Digi-manuell-CA

## Ref. No.: 186136

## DigiLED DALI CA

Digital colour controls via DALI light management $t_{C}=60^{\circ} \mathrm{C}$ max.
Max. current per control channel: 1.25 A
Type: WU-ST-004-Digi-DALI-CA
Ref. No.: 186138

## DigiLED DMX CA

Digital colour controls via DMX light management $\mathrm{t}_{\mathrm{C}}=60^{\circ} \mathrm{C}$ max.
Max. current per control channel: 1.25 A
Type: WU-ST-003-Digi-DMX-CA

## Ref. No.: 186153

## DigiLED IR CA

Colour adjustment by a portable remote control
Call up of pre-adjusted setting possible
Data transfer via infra-red
$\mathrm{t}_{\mathrm{C}}=55^{\circ} \mathrm{C}$ max.
Max. current per control channel: 1.25 A
Type: WU-ST-005-Digi-IR-CA
Ref. No.: 186154

The CA series of VS colour control modules are available with both a manual operating pad and a DALI interface or "PUSH" or DMX variant.

Furthermore the DigiLED Mono is available. The DigiLED Mono enables the dimming of single-colour (e. g. white) LED modules.

## DigiLED RF CA

Easy operation possible via radio frequency (RF) and a keypad with 7 buttons. The operation via radio frequency (RF) enables a flexible installation. Optical "line of sight" or cables are not necessary due to RF operation.
Dimensions: $93 \times 58 \times 29 \mathrm{~mm}$
Ambient temperature ta: -20 to $45^{\circ} \mathrm{C}$
Operating voltage: 24 V DC
Max. current per control channel: 1.25 A
Type: WU-ST-O12-DigiLED-RF CA

## Ref. No.: 186181

## Walltransmitter

Required to activate the programs
in the DigiLED RF
Dimensions: $86 \times 86 \times 15 \mathrm{~mm}$
Colour: white
Type: WU-ST-009-Walltransmitter
Ref. No.: 536843

## DigiLED Push CA

Colour adjustment by separate push button
Permits retrieval of pre-set programs
$\mathrm{t}_{\mathrm{c}}=55^{\circ} \mathrm{C}$ max.
Max. current per control channel: 1.25 A
Type: WU-ST-006-DigiLED-Push CA
Ref. No.: 186144

DigiLED RF CA

Walltransmitter

DigiLED Mono CA

## Passive Slave CA

Increase of the system performance
for 24 V CA LED built-in system
No signal amplification on channels $R G B(W)$ $\mathrm{t}_{\mathrm{c}}=65^{\circ} \mathrm{C}$ max.
Type: WU-ST-O11-Passive-Slave CA
Ref. No.: 186172

## Passive Slave PCB CA

PCB for increase of the system performance
for 24 V CA LED built-in system
Without casing
No signal amplification on channels $R G B(W)$
$t_{C}=65^{\circ} \mathrm{C}$ max.
Type: WU-VB-004-Slave-PCB CA

## Ref. No.: flatband cable

Passive Slave PCB CA

Table 1: Terminal connection

| Pole | Colour coding | Function | Max. current-carrying <br> capacity | Colour coding <br> System flatband cable |
| :--- | :--- | :--- | :--- | :--- |
| 1 | red | supply line for LED built-in modules (+24 V) | 5 A | blue |

## LED Connection Technology for 24 V CA System

Various connection methods like flatband cables, feed-in cables, PCB distributors and slaves can be used to effect electrical connections between LED assembly modules and DigiLED CA colour control units.

Flatband and feed-in cables are designed to ensure that LED built-in modules can be connected to a DigiLED CA colour control unit or a PCB distributor or slave board up to the maximum current-carrying capacity specified in Table 1.

When setting up a 24 V CA system, it must be ensured that the minimum supply voltage stated in the data sheets of the LED built-in modules is attained through the combination of lead lengths.

## Flatband system cables

For reverse-polarity protected connections between LED built-in modules and/or groups and for connection to PCB distributors. The six-strand flatband cable is fitted with pre-assembled connectors that plug directly in to the sockets of the LED built-in modules and PCB
distributors.
Type: WU-VB-002-HP-20mm
Ref. No.: 539476 cable length: 20 mm Type: WU-VB-002-HP-100mm
Ref. No.: 539475 cable length: 100 mm
Flatband extension cable
Type: WU-VB-008-HP-extension-400mm
Ref. No.: $\mathbf{5 4 3 1 8 7}$ cable length: 400 mm

## Feed-in cable

For connecting LED built-in modules and groups to a DigiLED CA colour control unit or slave board. The reverse-polarity protected connector attached to the feed-in cable is plugged on the LED built-in module. The other side of the cable is then connected to the slave board or DigiLED CA colour control unit while ensuring correct polarity (colour coding)
Type: WU-VB-002-HP-Feed-in-500mm
Ref. No.: 535900 cable length: 500 mm

## Feed-in cable Mono

For reverse polarity protected connection between monochromatic LED built-in modules and 24 V voltage supply. The dimming function is not supported. Type: WU-VB-006-HP-Feed-in-500mm mono Ref. No.: 542267 cable length: 500 mm

## EasyConnect Cable for AluLED

Max. permissible current: 3 A
Number of strands: 2/4
(Strand diameter: $0.35 \mathrm{~mm}^{2} / 22$ AWG)
For monochrome modules with 2 strands
Ref. No.: 54342625 cm , male connector
Ref. No.: 54342750 cm , male/female connector For RGB modules with 4 strands

## Ref. No.: 54342825 cm , male connector

Ref. No.: 54342950 cm , male/female connector

## PCB distributor

For connecting up to four LED built-in modules or groups to a DigiLED CA colour control unit or slave board. The maximum current-carrying capacity per contact is 5 A on the input side (terminal) and as detailed in Table 1 (page 202) on the output side (connector). A standard six-strand conductor (e.g. LIYY $6 X 0.75 \mathrm{~mm}^{2}$ ) and up to four flatband cables can be used.
Type: WU-VB-003-DistriPCB CA
Ref. No.: 186141

## LED Constant Voltage Devices for LED Modules 24 V

## ComfortLine LED Constant Voltage Drivers

## 24 V / max. 20 W

These flat LED constant-voltage drivers are designed
for use in applications with small capacity range of up to 20 W .

## Electronic characteristics

## Expected service life time

at operation temperatures at tc point

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
With connection lead on primary side
Mains frequency: $50-60 \mathrm{~Hz}$

|  | Ref. No. <br> 186129 |  |
| :--- | :--- | :--- |

## EMERGENCY LIGHTING DEVICES FOR LED APPLICATIONS

## ELECTRONIC EMERGENCY LIGHTING DEVICES FOR LED APPLICATIONS

## For nominal operating periods of 1 hour or 3 hours

Emergency lighting systems spring to life any time normal main lighting systems fail. Emergency lighting is designed to ensure that staff can safely leave any rooms and that there is sufficient lighting to illuminate rescue paths/routes as well as to avoid panic situations.

VS emergency lighting devices are designed for use with LED applications and can be operated as part of a combined system with electronic LED drivers.

VS emergency lighting devices test the presence of and the charge left on batteries during regular cycles and display the existing status via a bi-colour LED (self-testing function). This both simplifies battery maintenance and ensures necessary emergency lighting in the event of a mains power cut. During normal operation, the batteries are recharged with mains power.

## Emergency Lighting <br> Modules for 3 Hours Operating Time

## 50, $\mathbf{1 3 0}$ or $\mathbf{2 2 0}$ V voltage output

VS emergency lighting modules are suitable for LED luminaires.
Dimensions ( $\mathrm{L} \times W \times H$ ): $210 \times 31.4 \times 21.5 \mathrm{~mm}$
Fixing hole distance: 205.5 mm
Ambient temperature: 5 to $50^{\circ} \mathrm{C}$

## Electrical characteristics

Power consumption: 4 VA
Constant output: 3 W
Weekly automatic self-diagnosis
and daily testing of system status
Battery charge is checked during regular
testing cycles.
Optical status display via two-colour

## Connection details

Mains voltage: $220-240 \mathrm{~V} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
LED emergency light devices must be connected
in line with the installation manual.

## Technical notes - Rechargeable batteries

Choice of rechargeable battery depends on
the operating device.
Charging time of rechargeable batteries: max. 24 hrs. Rechargeable batteries: nickel-cadmium (NiCd)

LED

## LED LAMPS

MR16, AR111,
PAR30, PAR38, GU10

## LED - THE GREEN FUTURE LIGHTING

LEDs contain no mercury and are low on energy consumption, as a result of which they lead the field when it comes to "green lighting". Thanks to their eco-friendly properties, they can make a valid contribution to reducing your carbon footprint and countering the greenhouse effect. Moreover, LEDs start instantaneously at full brightness and are available in many colours.

In addition to providing UV- and IR-free light, LEDs are vibration-proof and have a very long service life that further increases the overall efficiency of any lighting system. As LED lamps are now powerful enough to replace both incandescent and low-voltage halogen lamps, they are becoming increasingly popular beyond the field of decorative lighting.

## Low-voltage LED Lamps

Suitable for magnetic halogen transformers, electronic halogen converters ( 12 V AC ) and electronic LED drivers ( 12 V DC )

## MR 16, 5.5 W

Design style: COB lens

Operating temperature: 0 to $40^{\circ} \mathrm{C}$
Storage temperature: -20 to $60^{\circ} \mathrm{C}$
Input voltage: 12 V AC/DC
Non dimmable
Base: GU5.3

## MR16, 7 W

Design style: COB reflector
Operating temperature: 0 to $40^{\circ} \mathrm{C}$
Storage temperature: -20 to $60^{\circ} \mathrm{C}$
Input voltage: 12 V AC/DC
Dimmable (Magnetic with leading-edge dimmers/
Electronic preferred with trailing-edge dimmers)
Base: GU5.3

| Type | Ref. No. | Colour | Colour temperature K | $\begin{array}{\|l\|l\|} \hline \mathrm{CRI} \\ \mathrm{R}_{\mathrm{a}} \\ \hline \end{array}$ | $\begin{aligned} & \text { Luminous flux } \\ & \text { Im } \\ & \hline \end{aligned}$ | Light intensity cd | Beam angle $\left({ }^{\circ}\right)$ | Field angle ( ${ }^{\circ}$ ) | Power factor | Power W | Energy efficiency |

MR16, 5.5 W $24^{\circ}$

MR16, 5.5 W $36^{\circ}$

MR 16,7 W $24^{\circ}$

MR 16, 7 W $36^{\circ}$

## LED Lamps

Replacement for low-voltage incandescent lamps

Suitable for 12 V AC magnetic transformers,
12 V DC electronic drivers and
12 V AC electronic converters

## AR111, 16 W

Operating temperature: -20 to $40^{\circ} \mathrm{C}$
Storage temperature: -40 to $60^{\circ} \mathrm{C}$
Input voltage: $12 \mathrm{~V} \mathrm{AC/DC}$
Not dimmable
Base: G53

## AR111, 13 W

Operating temperature: -20 to $40^{\circ} \mathrm{C}$
Storage temperature: -40 to $60^{\circ} \mathrm{C}$
Input voltage: 12 V AC/DC
Phase-cut dimmable (trailing-edge dimmers are preferred)
Base: G53

AR $111,36^{\circ}$

## Electronic Converters for LED Lamps 12 V

You will find LED converters for the LED lamps MR 16
and AR111 on page 209-212.

## Important notice for LED lamps for replacement of low-voltage halogen incandescent lamps

- Do not connect more than one unit to one transformer
- Do not use in ambient temperatures of more than $40^{\circ} \mathrm{C}$
- Unsuitable for installation in enclosed or airtight luminaires
- For indoor use only
- Unsuitable for use outdoors or in high-moisture environments

## Important notice for LED lamps for replacement of mains voltage incandescent lamps

- Unsuitable for operation with an additional driver
- Integrated high-frequency driver
- Do not use in ambient temperatures of more than $40^{\circ} \mathrm{C}$
- Unsuitable for installation in enclosed or airtight luminaires
- For indoor use only
- Unsuitable for use outdoors or in high-moisture environments
- Dimmable with phase-cutting dimmers (E27 PAR and GU 107 W lamps only); minimum dimmer load has to be respected. The compatibility of the lamp to the dimmer has to be confirmed prior to installation to avoid flickering and/or noises Trailing-edge dimmers are preferred.

## Caution: Always disconnect equipment from the mains before replacing lamps!

## VS LED Lamps - Mains Voltage Replacement

## LED Lamps

With integrated driver for replacement of mains voltage halogen incandescent lamps

LED lamps made by Vossloh-Schwabe will fit most standard E27 and GU10 bases. These low-power, high-brightness and highly eco-friendly lamps are sure to improve the overall efficiency of your lighting system

## PAR30, 12 W

Operating temperature: -20 to $40^{\circ} \mathrm{C}$
Storage temperature: -40 to $60^{\circ} \mathrm{C}$
Input voltage: 220-240 V AC
Phase-cut dimmable (trailing-edge dimmers are preferred) Base: E27

## PAR38, 17 W

Operating temperature: -20 to $40^{\circ} \mathrm{C}$
Storage temperature: -40 to $60^{\circ} \mathrm{C}$

Input voltage: 220-240 V AC
Phase-cut dimmable (trailing-edge dimmers are preferred)
Base: E27

## General information on LED technology

Thanks to the constant developmental progress made in LED semiconductor technology, the fields of application for LEDs are growing continuously. Mood and architectural lighting, for instance, are already benefiting from the saturated colours of and possibilities afforded by RGB colour control. Ever higher light efficiency levels at higher currents are making white LEDs increasingly attractive for general lighting. Among others, further decisive advantages are great longevity, low energy consumption, neither UV or IR beam nor any hazardous substances.

The key basis of modern optoelectronics is the availability of high-performance LEDs in the three primary colours red, green and blue as well as white and warm white. By assembling these on circuit boards and in combinafion with converters and control systems, lighting systems can be created for the most diverse areas of use.

Vossloh-Schwabe's production of LED modules is based on tried-and-tested COB and SMD technology. This makes it possible to design modules in various dimensions and performance classes. COB (Chip On Board) technology enables super-flat designs with very high chip densities. SMD (Surface Mounted Device Technology) enables convenient, quick and simultaneous assembly of LED and electronics devices.

## Working principle of light emitting diodes (LEDs)

An LED semiconductor chip is a semiconductor component that is made up of two differently doped crystallayers, one of which positive (p) and the other negative ( $n$ ). Light is emitted at the depletion-layer pn boundary for a current flow in forward direction.

An LED converts applied electric energy into visible electromagnetic radiation. The construction and doping of a semiconductor depends on the desired wavelength $\lambda$ (colour), which can only be monochromatic (red, orange, yellow, green or blue). Colour blends are created by varying the number of LEDs in the individual colours. By adding certain converter materials, LEDs can also produce white and warm white light. This type of light generation using a semiconductor is generally referred to as luminescence, i.e. the generation of cold light whose rays contain no warmth and are emitted without infrared (IR).

## Semiconductor materials for LED chips

Irrespective of the specific model, an LED always consists of the following components: leadframe, LED chip and contacting using conductive adhesive and bonding.
While the leadframe can be made of a PCB or ceramics, plastics and other materials, the LED chips are mounted on a die-cut reflector (cathode) using conductive adhesive to achieve higher light intensities with a focused beam of light. The anode is connected using bonding wire.
The optical viewing angle $(\varphi)$ of an LED is determined by the geometry of the casing including reflector and the position of the chip within the casing.
Small in size and highly resistant against mechanical impact/stress, LEDs are an ideal component for lighting applications. Special modular solutions are also available for applications involving differing ambient conditions (humidity, ambient temperature, etc.).

## Technical Details

## Visible light within the electromagnetic spectrum

Visible light only accounts for a small part of the electromagnetic spectrum. The part of the electromagnetic spectrum that is visible for humans ranges from ultraviolet ( $\lambda=380 \mathrm{~nm}$ ) to dark red ( $\lambda=780 \mathrm{~nm}$ ).

## Light sensitivity of the human eye

By day, the maximum light sensitivity ( Km ) of the human eye for green is at $\lambda=555 \mathrm{~nm}$ and drops to $\lambda=510 \mathrm{~nm}$ by night. Light sensitivity falls off sharply for both higher and lower wavelengths and only totals $1 \%$ of day vision for blue at $\lambda=430 \mathrm{~nm}$ and dark red at $\lambda=720 \mathrm{~nm}$. Thus, in order for the human eye to perceive light of these wavelengths at the same intensity as yellow-green light, its luminance LV needs to be 100 times greater.

## Service life of LEDs

The service life of an LED is determined by various factors:

- the degradation rate of the semiconductor material and the encapsulation material
- the applied operating current $I_{F}$
- the ambient temperature ta during operation and
- the thermal resistance

The term degradation describes the decrease in brightness of an LED chip as a result of the applied forward current during normal operation. Given normal operating conditions ( $\mathrm{t}_{\mathrm{a}}=25^{\circ} \mathrm{C}$ at $\left.\mathrm{I}_{\mathrm{F}}=10-30 \mathrm{~mA}\right)$, LEDs will provide a service life of up to 100,000 operating hours (typically 50,000 hours for High Power applications), after which time the brightness of the LED will have dropped typically to $70 \%$ of its original value.

## Technical Details

## LED efficiency

In theory, the internal efficiency of an LED chip is 90\%, meaning that 90\% of the applied electrical energy is converted into visible light at the pn junction layer.

However, a part of the light emitted at the pn junction layer cannot pass through the semiconductor structure and it remains a major technological challenge to optimise the coupling of light out of the chip with the help of innovative designs. These processes determine the external degree of LED efficiency, which denotes the magnitude of visible output that can pass through the semiconductor structure when, for instance, 1 W of electrical power is applied to an LED.

## Colour design with LEDs

CIE Chromaticity Chart (CIE 1931 according to DIN 5033)

The CIE chromaticity triangle (standardised CIE 1931 chromaticity chart according to DIN 5033) makes it possible to precisely plot the colours of light sources and objects using two standardised (and previously gauged) chromaticity coordinates, the $x$ and $y$ values. Every point in this chart represents the chromaticity location of a certain chroma. Colours of the same chromaticity only differ from each other in terms of their intensity (colour saturation). The so-called "no-colour point" (white, grey and black, depending on brightness) is situated in the middle of the chart at $x=0.33$ and $y=0.33$.

The boundary of the chromaticity chart is made up of the gamut of spectral colours from 380 nm (blue-violet) to 780 nm (dark red) and the so-called purple boundary. As a result of additive mixing of two or more coloured light sources the chromaticity coordinates are always along a direct line between the starting coordinates.

When using LED lighting, different colours can be created using additive colour mixing (RGB) or by transforming the wavelengths a diode emits by adding a luminescent material in a manner similar to fluorescent lamps. In the case of additive colour mixing/control, appropriate control devices are used to adjust the brightness of the individual LED colours (RGB) to create the desired light colour.

## LED system components

- LED light modules
- LED operating devices
- LED control modules
- LED connection technology

When selecting LED components, it is important to take account of their technical specifications, especially with regard to voltage range, current and temperature. VS provides a large range of components for the various areas that all go to build a perfectly matched system. The technical specifications of the various components can be found on the product pages. All VS LED operating devices work with a safety extra-low voltage (SELV) on the output side.

## Assembly Instructions for LEDs

## For mounting and installing LED components

## Mandatory regulations

DIN VDE 0100 Erection of low voltage installations

EN 60598-1 Luminaires - part 1: general requirements and tests
EN 60838-2-2 Miscellaneous lampholders - part 2-2: particular requirements connectors for LED-modules

EN 61347-1 Lamp controlgear - part 1: general and safety requirements

EN 61347-2-11 Controlgear - part 2-11: particular requirements for miscellaneous electronic circuits used with luminaires

EN 61347-2-13 Lamp controlgear - part 2-13: particular requirements for DC or AC supplied electronic controlgear for LED modules

EN 61000-3-3 Electromagnetic compatibility (EMC) - part 3-3: limits - limitation of voltage fluctuations and flicker (equipment input current $=16 \mathrm{~A}$ per phase)

EN 61547 Equipment for general lighting purposes - EMC immunity requirements

EN 62471
Photobiological safety of lamps and lamp systems

## Mechanical mounting of LED operating devices

Surface Solid, flat surface for good heat discharge required. Avoid mounting protruding surfaces.

Mounting location
Converters must be protected against moisture and heat.

Installation in external luminaires
Luminaire requires water protection rate of $=4$ (e.g. IP54).
Heat transfer If the converter is destined for installation in a luminaire, sufficient heat transfer must be ensured between the converter and the luminaire casing. Converters should be mounted with the greatest possible clearance to sources of heat. During operation, the temperature measured at the $t_{c}$ point of the converter must not exceed the specified maximum value.

## Additional mounting instructions for independent LED operating devices

Mounting position Any
Clearance Min. of 0.10 m from walls, ceilings, insulation Min. of 0.10 m from other electronic ballasts Min. of 0.25 m from sources of heat (LEDs or other lamps)

Surface Solid; device must not be allowed to sink into insulation materials

## Safety, assembly and handling information for LED modules

Installation and maintenance must always be performed by a qualified fitter in accordance with relevant legislation. The following instructions must be strictly observed. Vossloh-Schwabe Deutschland GmbH accepts no liability for any possible inaccuracies during installation, any non-compliance with these instructions or for any possible omissions in this publication.

In addition, Vossloh-Schwabe Deutschland GmbH reserves the right to make modifications at any time and without prior notification. This data sheet is an integral part of the equipment and its safety devices and should therefore be kept in a safe place for easy reference. The equipment must always be disconnected from the mains prior to undertaking any maintenance work. The safety instructions on the type plate of the components must be strictly observed.

Installation must be conducted at zero potential after disconnection from the line. Modules can have sharp edges or corners. Please take special care during installation to avoid injury. The modules can get hot. Please provide warning notices at the luminaire body if necessary.

LED modules and all PCB components must not be subjected to undue mechanical stress:

- LED modules must not be handled as bulk cargo.
- Shear and pressure stress must be avoided on SMD LEDs and the grouting material of COB LEDs during assembly and handling.

The circuit path must not be damaged or interrupted. We recommend using clips or plastic screws for installation purposes to avoid short circuits and damage to the modules.

The LED modules are not protected against short-circuiting, overloading or overheating. The use of Vossloh-Schwabe electronic power supply units is therefore absolutely essential. Using other power supply units is not recommended. Please ensure you choose the correct electronic power supply unit for the module in question and that the respective output parameters (current, voltage, wattage) are correct (see www.vossloh-schwabe.com).

Safe operation is only possible by the use of external constant-current sources.
Power supply units must be used for operation, in which the following protective measures are ensured:

- Short-circuit protection
- Overload protection
- Overheating protection
- SELV (Safety Extra Low Voltage)

Please ensure standard ESD (electrostatic discharge) protection measures are employed when handling and installing LED modules. Electrostatic discharge can damage LEDs.

Please ensure the correct polarity of the leads prior to commissioning. Reversed polarity can destroy the modules.
The maximum output of the power supply must be observed.
For optimal load of used constant-current driver the LEDSpots can only be connected in series. The quantity of LEDSpots is limited by the sum of forward voltage and the capacity of used constant-current driver.

A parallel connection of the modules is not allowed.

The modules are not protected against dust or moisture (except LEDLine Flex SMD Professional Outdoor, LEDSpots IP54, Roadway Light and Industrial Light IP66/IP67). When LED modules are operated in unduly moist or dusty environments, care must be taken to ensure each module is built into a protective casing in compliance with the correct IP classification or provided with corrosion protection. Damage caused by moisture and/or corrosion will not be recognised as a material or manufacturing defect.

To ensure smooth module operation, care must be taken that module temperatures at the $t_{c}$ point never exceed the maximum values stipulated in the data on catalogue pages.

Due to the numerous installation options and differing operating conditions, no precise installation guidelines can be provided that will ensure the maximum temperature values are never exceeded. In principle, the LED modules can be mounted on a flat metal surface (heat sink) that must, however, provide a large enough surface area to ensure the generated heat can be dissipated to the surroundings.

Under no circumstances may LED modules ever be covered by insulation material or similar. Air ventilation must be ensured.

Please ensure adhesive pads or other products with adhesive areas (LEDLine Flex SMD Professional, LEDLine Flex SMD Professional Outdoor) are only used on dry and clean surfaces that are free of grease, oil, silicone and dirt particles. Owing to the varying application options and different types of surface as well as ambient conditions, VS accepts no liability for the quality of the adhesive bond achieved when mounting these products.

Tests have shown the following chemicals to be harmful to LEDs used on the modules. It is recommended not to use the under-mentioned chemicals anywhere in an LED system. The fumes from even small amounts of these chemicals may damage the LEDs.

- Chemicals that might outgas aromatic hydrocarbons (e.g., toluene, benzene, xylene)
- Methyl acetate or ethyl acetate (i.e., nail polish remover)
- Cyanoacrylates (i.e., "Superglue")
- Glycol ethers
(including Radio Shack ${ }^{\circledR}$, Precision Electronics Cleaner - dipropylene glycol monomethyl ether)
- Formaldehyde or butadiene (including Ashland PLIOBOND® adhesive)
- Dymax 984-LVUF conformal coating
- Loctite Sumo glue
- Gorilla glue
- Clorox bleach
- Clorox Clean-Up cleaner spray
- Loctite 384 adhesive
- Loctite 7387 activator
- Loctite 242 threadlocker

## DALI LIGHT CONTROL GEAR AND ACCESSORIES

## INTELLIGENT INDOOR LIGHTING

The VS Light Controllers are light management systems that were developed as a convenient means of controlling and regulating light.

Communication between the Light Controller and the luminaire is achieved using the standard DALI protocol. The Light Controllers comply with the standard IEC 62386:2008. Within this standard, the number of maximum possible luminaires is defined as 64 per DALI line. The controllers are designed for mounting on a 35 mm DIN installation rail.

The entire lighting system was designed to permit easy and convenient configuration. Any later modifications to the system can thus be carried out without any problems.

## Typical applications

- Offices, industrial spaces and warehouses
- Supermarkets
- Public buildings (e.g. schools and hospitals)
- Stairwells and hallways
- Sanitary facilities

## Lics

- Adjustment of lighting levels to suit human needs
- Energy savings and cost reductions
- More convenience thanks to automation

## Overview of the LiCS Indoor System Network

* Functionality limitations of the system possible; please observe the notes in the controller operation manuals.

## SYSTEM INFORMATION

Server (Win 7) or LightBox
Optional: Access Point for operating elements

## FUNCTIONS LIGHT CONTROLLER IP/DALI

- Network-compliant
- Intelligent networking of DALI devices

Lighting control:

- 3 level Motion detection (automatic and semi-automatic)
- Constant light control
- Intelligent day- and time-dependent switching functions
- Astro function
- Scene settings
- Push function (on/off, up and down)
- Dimming (only up or only down)
- ON/OFF function, ON function, OFF function
- Light value
- Stairwell function (timer)
- Retrieval of various sensor-gauged values
- Logic functions
- Push-key and operating element
- Classic push buttons
- Touch4Light
- Tablet
- EnOcean
- DAll buttons
- Documentation
- Device documentation
- Save/Load
- Automated error detection (email report
- User accounts (password protection)
- Language:
- German
- English
- Further language on request
- Further functions
- Minimising standby losses
- Intelligent device exchange

## Light Controller IP/DALI

## For installation in a distribution board

This light control gear (gateways) is designed for installation in a distribution board.

## Technical notes

Configuration interface: via browser via tablet/PC Ambient temperature ta: 5 to $50^{\circ} \mathrm{C}$

$$
\left(186484,186485 \text { ta: } 5 \text { to } 45^{\circ} \mathrm{C}\right)
$$

Push-in terminals with lever opener: $0.5-2.5 \mathrm{~mm}^{2}$ Degree of protection: IP20, Protection class I
RFI-suppressed
The MultiSensors and DALI push-button interfaces are connected directly to the DALI bus

## Connections

- Mains connection: 220-240 V AC, 50-60 Hz
- Max. power consumption 12 W
- 2xRJ45 (Ethernet TCP/IP) 10/100MBit/s, Daisy Chain
- 1 DALI bus: max. current on DALI bus $=200 \mathrm{~mA}$ (see the respective data sheet for current consumption of individual components)
- As a standard DALI bus is not SELV-compliant, the DALI cable must be rated for mains voltage.
- The DALI bus features reversible electronic overload and short-circuit protection.
- 8 independently configurable push button inputs, cables must be rated for mains voltage
- Minimising standby losses
- For Light Controllers with RF operation Antenna jack: radio signal with a frequency of 868 MHz

## LightBox

## For operating Light Controllers of the IP/DALI series

The LightBox serves to manage the tasks performed by the Light Controller IP and is pre-configured for plug-and-play operation.

## Technical notes

- Mains switch for powering up the LightBox lactivates automatically once mains power is restored following a power cut).
- Indicator: green status LED at the front
- As an alternative to client-based configuration (e.g. using a tablet, etc.), a monitor or input device can be connected during operation for configuration purposes.
- Optional wake-on LAN
- The Windows 8.1 N operating system merely needs to be personalised and activated by telephone.

## Connections

- Mains switch
- Mains connection with power supply unit
- RJ45 connection (Ethernet)
- $6 \times$ USB
- HDMI output
- Display port
- Wi-Fi antenna

System architecture
LightBox with DHCP
System architecture
LightBox without DHCP

## DALI Push-button Interface

## For connecting up to 4 push buttons to a Light Controller IP/DALI

DALI push-button interfaces make it possible to install
push-buttons at any point along the DALI bus without
needing to connect an additional power supply source.
Designed for flush-mounted installation.
For built-in into flushtype boxes
Control input: DALI acc. to IEC 62386:2008
DALI current consumption: 4 mA
With built-in LED (red) for configuration
Dimensions (LxW×H): $32 \times 22 \times 13 \mathrm{~mm}$, weight: 30 g
Connection leads: $0,5 \mathrm{~mm}^{2}$, ferrules on bare end of core

Protection class II

## Ref. No.: 186476

## Light Controller L/LW and LS/LSW

## For installation in a distribution board

This light control gear is designed for installation in a distribution board.

## Technical notes

Configuration interface: and rotary push key (on the controller)
Ambient temperature ta: 5 to $50^{\circ} \mathrm{C}$
Push-in terminals with lever opener: $0.5-1.5 \mathrm{~mm}^{2}$ Degree of protection: IP20, Protection class I
RFI-suppressed
The MultiSensors are connected directly
to the DALI bus.

## Connections

- Mains connection: 220-240 V AC, 50-60 Hz
- Max. power consumption 9 W
- 1 DALI bus to 3 pairs of terminals: max. current on DALI bus $=200 \mathrm{~mA}$ (see the respective data sheet for current consumption of individual components)
- As a standard DALI bus is not SELV-compliant, the DALI cable must be rated for mains voltage.
- The DALI bus features reversible electronic overload and short-circuit protection.
- 6 independently configurable push button inputs, cables must be rated for mains voltage
- Minimising standby losses
- For Light Controllers with RF operation Antenna jack: Radio signal with a frequency of 868 MHz

## General functions

Automatic and semi-automatic motion detection, constant light control, push function, ON/OFF function, stairwell function (timer), system analysis software, password protection
Software languages: German, English, French, Spanish, Italian

## Additional functions

Scene settings, control options (single and/or group) (Light Controller L/LW)

## Light Controller LW/LWS

Suitable for wireless operation with EnOcean No. of wireless modules: 16 pcs. Antenna needed

DALI Group Configuration Tool

FMH4-rw Ref. No.: 555534

Discourage burglaries, timer clock, control options (group)
(Light Controller LS/LSW)

| Light Controller | Ref. No. | Max. No. of operating devices <br> pcs./lead | No. of MultiSensors <br> pcs./lead | En Ocean | Dimensions <br> $m m(L \times W \times H)$ | horizontal pitches <br> hp | Weight <br> $g$ |

# Lighting Control System for Indoor Applications 

## Antennas

To supplement LiCS Indoor System

To ensure faultless wireless operation, an antenna must be connected that is set to the respective frequency.

When fitting the antenna, care must be taken that it is not shielded by metal objects, e.g. steel cabinets, radiators, ventilation shafts etc., to ensure optimum signal reception.

The requisite antenna is provided by Vossloh-Schwabe in two models: the screw-base model comes with a detachable connection cable, while the magneticbase model is fitted with a non-detachable connection cable.

## Lighting Control System for Indoor Applications

## Light Controller S

## For independent operation

These light control devices are suitable for independent operation (e.g. in false ceilings).

## Technical notes

Configuration interface: dip switch (on the device)
Ambient temperature $\mathrm{t}_{\mathrm{a}}: \mathrm{O}$ to $50^{\circ} \mathrm{C}$
Max. casing temperature tc: $65^{\circ} \mathrm{C}$

Screw terminals: 0.75-2.5 mm²
Degree of protection: IP20, Protection class II
RFI-suppressed
The MultiSensors are connected directly

to the DALI bus.

## Connections

- Mains connection: 220-240 V AC/DC, 0/50-60 Hz
- Max. power consumption 6,5 W
- 1 DALI bus : max. current on DALI bus $=200 \mathrm{~mA}$ (see the respective data sheet for current consumption of individual components)
- As a standard DALI bus is not SELV-compliant, the DALI cable must be rated for mains voltage.
- The DALI bus features reversible electronic overload and short-circuit protection.
- 1 configurable push button input: cables must be rated for mains voltage

## Functions

Automatic and semi-automatic motion detection,
constant light control, push function (64 EBs synchronously),
ON/OFF function, stairwell function (timer),
control option (broadcast)

| Light Controller | Ref. No. | Max. No. of operating devices <br> pcs./lead | No. of MultiSensors <br> pcs./lead | EnOcean | Dimensions <br> $\mathrm{mm}(1 \times W \times H)$ | Weight <br> g |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| S | $\mathbf{1 8 6 2 1 0}$ | 64 | 36 | no | $175 \times 42 \times 31,5$ |  |

## Lighting Control System for Indoor Applications

## Light Controller XS

## For luminaire installation

These light control devices are suitable for operation in luminaires.

## Technical notes

Configuration interface: dip switch (on the device)
Ambient temperature $t_{a}: 5$ to $50^{\circ} \mathrm{C}$
Max. casing temperature tc: $60^{\circ} \mathrm{C}$

Lifetime: 50,000 hrs.
Push-in terminals with lever opener: $0.5-1.5 \mathrm{~mm}^{2}$
Degree of protection: IP20
RFI-suppressed
For luminaires of protection class I and II

The MultiSensors are connected directly to the DALI bus.

## Connections

- Mains connection: 220-240 V AC/DC, 0/50-60 Hz
- Max. power consumption 0.8 W
- 1 DALI bus: max. current on DALI bus $=20 \mathrm{~mA}$ (see the respective data sheet for current consumption of individual components)
- As a standard DALI bus is not SELV-compliant, the DALI cable must be rated for mains voltage.
- The DALI bus features reversible electronic overload and short-circuit protection.
- 1 configurable push button input

## Functions

Automatic and semi-automatic motion detection,
constant light control, push function ( 10 EBs synchronously),
ON/OFF function, control option (broadcast)

| Light Controller | Ref. No. | Max. No. of operating devices <br> pcs./lead | No. of MultiSensors <br> pcs. $/$ lead | EnOcean | Dimensions <br> $\mathrm{mm}(\mathrm{LxW} \times \mathrm{H})$ | Weight <br> g |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| XS | $\mathbf{1 8 6 2 2 0}$ | 10 | 4 | no | $83 \times 30 \times 19$ |  |

## Lighting Control System for Indoor Applications

## Extender

## To extend LiCS Indoor system

An extender enables the maximum number of DALL compliant control gear units within a standard DALI system to be increased.

This means the DALI extender is installed and addressed in instead of the ballast. Up to 64 DALI control gear units can be connected to an extender output. All of these control gear units will either respond in the same way to an incoming signal (Ref. No.: 186194) or, given changed characteristics, will transfer values to the addressed DALI control gear units (Ref. No.: 186481).

The extender for DALI systems can only be used in combination with a DALI controller. When DALI commands are received, the extender behaves just like a DALI-compliant ballast.

## Technical notes

Configuration interface:
via a DALI controller

Ambient temperature ta: 0 to $50^{\circ} \mathrm{C}$
Max. casing temperature tc: $65^{\circ} \mathrm{C}$
Screw terminals: 0.75-2.5 mm²
Degree of protection: IP20, Protection class II
RFI-suppressed

## Connections

- Mains connection: 220-240 V AC/DC, 0/50-60 Hz
- Max. power consumption: 6.5 W
- For DALI signals in acc. with IEC 62386
- DALI current consumption: 2 mA
- 1 DALI bus to 3 terminal pairs: max. current on the DALI bus $=200 \mathrm{~mA}$
- As a standard DALI bus is not SELV-compliant, the DALI cable must be rated for mains voltage.
- The DALI bus features reversible electronic overload and short-circuit protection.

## Functions

Connection of up to 64 ballasts to a single DALI address
Extender Flex serves to transfer characteristics, which permit light to be staged in a more flexible manner, to the connected DALI addresses.
Example: group devices can be dimmed to varying degrees

| Type | Ref. No. | Max. No. of secondary <br> control gear units per Extender <br> pcs./lead | Functions | Dimensions <br> LxWxH <br> mm | Weight |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Extender | $\mathbf{1 8 6 1 9 4}$ | 64 | Broadcast Classic | Broadcast Flexible: a compilation of characteristics can be made available on request | $175 \times 4 \times 3 \times 31,5$ | 150 |
| Extender Flex | $\mathbf{1 8 6 4 8 1}$ | 64 | 150 |  |  |  |

# Lighting Control System for Indoor Applications 

## MultiSensors

## To supplement LiCS Indoor system

Daylight and motion sensors increase both energy
savings and convenience.

VS MultiSensors detect both light levels and motion.
In addition, MultiSensors feature a space-saving
design and were specifically developed to work
with VS Light Controllers. No external power supply
is required, as the sensors are supplied via the
DALI bus.

## Technical notes

Configuration interface:

> via the Light Controller

Ambient temperature $t_{a}: 0$ to $50^{\circ} \mathrm{C}$
Push-in terminals with lever opener: $0.5-1.5 \mathrm{~mm}^{2}$
DALI current consumption: 4 mA

## Functions

Motion detection and monitoring of lighting levels. With built-in LED (red): the light flashes during configuration when the sensor is selected.

## MultiSensor FM-E

For ceiling installation
With cord grip
Dimensions ( $\varnothing \mathrm{xH}$ ): $40 \times 43.8 \mathrm{~mm}$
Weight: 30 g
Ref. No.: 186321

## MultiSensor SM-E

For surface mounting
Dimensions $(\varnothing \times H)$ : $53 \times 48.5 \mathrm{~mm}$
Weight: 30 g

## Ref. No.: 186320

## MultiSensor IL-E

For luminaire installation
Dimensions $(\varnothing x H)$ : $45 \times 31.9 \mathrm{~mm}$
Weight: 30 g
Ref. No.: 186322

## Lighting Control System for Indoor Applications

## Industrial Sensors High Bay for Industrial Applications

## To supplement LiCS Indoor system

Using DALI MovementSensors increases both energy savings and application flexibility.

Vossloh-Schwabe MovementSensors are even capable of detecting motion in rooms with high ceilings (up to 8 m in height). Specifically developed for use with VS Light Controllers, these MovementSensors have been optimised for unprotected installation (HB 65) and to deal with obstructions in the detection field.

VS BrightnessSensors detect light levels in difficult environments that require an IP65 degree of protection. VS Brightness systems do not require an external power supply as the DALI lead can simply be connected through.

The fact that the sensors are connected via the DALI bus now makes it possible - and for the very first time - to manage an entire warehouse with just one Light Controller and to define individually adjustable or uniform lighting levels.

## Technical notes

Configuration interface: via the Light Controller Ambient temperature ta: -5 to $50^{\circ} \mathrm{C}$
Push-in terminals with lever opener: 0.5-1.5 mm²
DALI current consumption: HB 65: $2 \mathrm{~mA} / \mathrm{IP65}: 4 \mathrm{~mA}$

## Functions

Reliable HF motion detection with indication LED (red) (MovementSensor)
Reliable monitoring of light levels with indication LED (red) (BrightnessSensor)

## MovementSensor HB 65

For surface mounting
With cord grip
Degree of protection: IP65
Protection class II
Dimensions (LxWxH): $98 \times 73.2 \times 34 \mathrm{~mm}$
Weight: 151 g
Ref. No.: 186311

## BrightnessSensor IP65

For surface mounting
With cord grip
Degree of protection: IP65
Protection class II
Dimensions (LxWxH): $98 \times 73 \times 34 \mathrm{~mm}$
Weight: 140 g

## Ref. No.: 186370

## General safety information

- LiCS products may only be installed and commissioned by authorised and fully qualified staff.
- These instructions must be carefully read before installing and commissioning the system, as this is the only way to ensure safe and correct handling.
- Before any work is carried out on the equipment, it must be disconnected from the mains.
- All valid safety and accident-prevention regulations must be observed.
- The products should never be inexpertly opened as this poses lethal danger due to electrical shock. Repairs may only be undertaken by the manufacturer.
- On no account may the DALI control lead be used to carry mains voltage or any other external voltage as this can destroy individual system components.

## Light Controller IP/DALI

- In a distribution board on a $35-\mathrm{mm}$ mounting rail in acc. with DIN 43880; required installation space: 10 hp (horizontal pitches) ( 180 mm )
- Hook the light controller over the upper edge of the rail using the two mounting notches. Then carefully press the controller onto the lower part of the rail until the mounting spring on the controller snaps into place over the rail. If required, use a screwdriver to help you with the spring.

Removal To remove the controller from the mounting rail, use a screwdriver to loosen the spring and ease the controller over the rail flange from the bottom.

## Installation instructions

- Conductor cross-section for all terminals: $0.5-2.5 \mathrm{~mm}^{2}$ for rigid or flexible conductors
- Cable preparation (see right)
- To protect the equipment, a 10 A or 16 A , Type B automatic circuit breaker must be fitted.
- Push button inputs 1-8: cables must be rated for mains voltage; max. cable length $=100 \mathrm{~m}$.
- As a standard DALI bus is not SELV-compliant, the DALI lead must be rated for mains voltage.
- A max. of 64 DALI operating devices in aggregate can be connected as well as up to 36 MultiSensors or DALl push-button interfaces, which in total must not exceed 200 mA . The exact number of components can be found in the manual.
- The power supply and the DALI lead can be laid in a single cable provided the cable does not exceed a maximum length of 100 m , e.g. using $5 \times 1.5 \mathrm{~mm}^{2}$.
- Please observe the maximum lengths of the DALI lead during installation:

|  | $\mathbf{2 . 5} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{1 . 5} \mathbf{m m}^{\mathbf{2}}$ | $\mathbf{1} \mathbf{m m}^{\mathbf{2}}$ | $\mathbf{0 . 7 5} \mathbf{m m}^{\mathbf{2}}$ | $\mathbf{0 . 5 \mathbf { m m } ^ { \mathbf { 2 } }}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{6 . 2 ~ \Omega ~ m a x . ~}$ | 300 m | 300 m | 180 m | 130 m | 80 m |

- The relay contact is a potential-free closing contact. The current load of the relay contact must not exceed an Ohmic load of $I_{\text {max. }}=3 \mathrm{~A}$. When using the standby contact, an additional external power relay should be used.
- Connection to the LightBox (e.g.) is effected via RJ45 (Ethernet TCP/IP) $10 / 100 \mathrm{Mbit} / \mathrm{s}$.
- The two RJ45 ports can be used as a (daisy chain) switch.
- It is not recommended to connect atypical network components of a light management system (e.g. printers) directly to the Light Controller.

## Technical Details - Lighting Control System for Indoor Applications

## Additional information

- To ensure faultless wireless operation, an antenna must be connected that is set to the respective frequency. This antenna is not included in the scope of delivery.
- Please refer to the manual at www.vossloh-schwabe.com/en/home/products/ light-management-systems-for-indoor-applications.html for exact instructions on how to configure the system using the controller.
- The outputs of different controllers must not be connected with each other.
- To ensure safe operation of the controller, the maximum ambient temperature must not be exceeded.
- Integration of VS Extenders limits the whole system to its basic funcitions for control. Please observe the notes in the appendix of the controller operation manuals.

## Light Controller L/LS and LW/LSW

## Installation

- In a distribution board on a $35-\mathrm{mm}$ mounting rail in acc. with DIN 43880; required installation space: 7 hp (horizontal pitches) ( 126 mm )
- The controller must be installed so the display screen is in the upper left corner.
- Hook the light controller over the upper edge of the rail using the two mounting notches. Then carefully press the controller onto the lower part of the rail until the mounting spring on the controller snaps into place over the rail. If required, use a screwdriver to help you with the spring.

## Removal To remove the controller from the mounting rail, use a screwdriver to loosen the spring and

 ease the controller over the rail flange from the bottom.
## Installation instructions

- Conductor cross-section for all terminals: $0.5-1.5 \mathrm{~mm}^{2}$ for rigid or flexible conductors
- Cable preparation (see right)
- To protect the equipment, a 10 A or 16 A , Type B automatic circuit breaker must be fitted.
- Push button inputs 1-6: cables must be rated for mains voltage; max. cable length $=100 \mathrm{~m}$.
- As a standard DALI bus is not SELV-compliant, the DALI cable must be rated for mains voltage.
- A max. of 64 DALI operating devices in aggregate can be connected as well as up to 36 MultiSensors, which in total must not exceed 200 mA . The exact number of components can be found in the manual.
- The power supply and the DALI lead can be laid in a single cable provided the cable does not exceed a maximum length of 100 m , e.g. using $5 \times 1.5 \mathrm{~mm}^{2}$.
- Three electrically connected DALI outputs make it easier to connect DALI control gear. Please observe the maximum lengths of the DALI bus during installation:

|  | $\mathbf{1 . 5} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{1} \mathbf{m m}^{\mathbf{2}}$ | $\mathbf{0 . 7 5} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{0 . 5} \mathbf{~ m m}^{\mathbf{2}}$ |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{6 . 2 \boldsymbol { \Omega } \mathbf { ~ m a x . }}$ | 300 m | 180 m | 130 m | 80 m |

- The relay contact is a potential-free closing contact. The current load of the relay contact must not exceed an Ohmic load of $I_{\text {max. }}=3 \mathrm{~A}$. When using the standby contact, an additional external power relay should be used.
- Although models of the Light Controller L/LS and LW/LSW feature an antenna-connection jack (located top right on the front), only the jack on the LW/LSW model is functional. This is where the antenna is connected to enable wireless operation (EnOcean) of the Light Controller LW/LSW.

## Additional information

- To ensure faultless wireless operation, an antenna must be connected that is set to the respective frequency. This antenna is not included in the scope of delivery.
- Please refer to the manual at www.vossloh-schwabe.com/en/home/products/ light-management-systems-for-indoor-applications.html for exact instructions on how to configure the system using the controller.
- The outputs of different controllers must not be connected with each other.
- To ensure safe operation of the controller, the maximum ambient temperature must not be exceeded.

Circuit diagram of Light Controller L/LS and LW/LSW

Technical details Light Controller L/LS and LW/LSW

## Technical Details - Lighting Control System for Indoor Applications

## Light Controller S

Installation - Independent installation, e.g. in false ceilings

- Easy and time-saving installation thanks to end caps that snap into place without needing tools.
- Clearance: min. 0.1 m to walls, ceilings, insulation and other electronic devices; min. 0.25 m to sources of heat (e.g. lamps)
- Surface: solid, must not let the controller sink into insulation material
- Fastening: using 4-mm screws

## Installation instructions

- Conductor cross-section for all terminals: $0.75-2.5 \mathrm{~mm}^{2}$
- Cable preparation (see right)
- Screw terminals: max. tightening torque $=0.4 \mathrm{Nm}$
- A standard DALI bus only features basic insulation. All DALI cables must be rated for mains voltage.
- A max. of 64 DALI operating devices in aggregate can be connected as well as up to 36 MultiSensors, which in total must not exceed 200 mA . The exact number of components can be found in the manual.
- The power supply and the DALI lead can be laid in a single cable provided the cable does not exceed a maximum length of 100 m , e.g. using NYM $5 \times 1.5 \mathrm{~mm}^{2}$.
Please observe the maximum lengths of the DALI bus during installation:

|  | $\mathbf{1 . 5} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{1} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{0 . 7 5} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{0 . 5} \mathbf{~ m m}^{\mathbf{2}}$ |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{6 . 2 \Omega \mathbf { ~ m a x } .}$ | 300 m | 180 m | 130 m | 80 m |

- Push button inputs: cables must be rated for mains power; maximum 100 m .

## Light Controller XS

## Installation - Any installation location

- Suitable for installation only in dry rooms or in luminaires, cases, casings or similar.

If destined for use in outdoor applications or spaces subject to higher degrees of moisture,
the Light Controller XS must be installed in a casing with a suitable degree of protection

- Fastening with 3 mm or 4 mm screw
- Take care to ensure a solid, flat surface.

## Application/Function

- Suitable only for installation in a luminaire; unsuitable for independent operation.
- For constant light control or motion detection, or a combination of both.
- In addition, a target value for constant light control can be set via manual dimming.

## Installation instructions

- Conductor cross-section for all terminals: $0.5-1.5 \mathrm{~mm}^{2}$
- Cable preparation (see right)
- A standard DALI bus only features basic insulation. All DALI cables must be rated for mains voltage.
- Operation without sensors:

A max. of 10 DALI operating devices can be connected; no MultiSensors are allowed.

- Operation with sensors:

If one VS MultiSensor is connected a max of 8 DALI ballasts can be connected in addition.

- Push button inputs: cables must be rated for mains power; maximum 15 m .
- Please observe the maximum lengths of the DALI bus during installation:

The DALI lead does not exceed a maximum length of 95 m , e.g. using NYM $5 \times 1.5 \mathrm{~mm}^{2}$

- The power supply and the DALI lead can be laid in a single cable, e.g. using $5 \times 1.5 \mathrm{~mm}^{2}$

## 3

## Technical Details - Lighting Control System for Indoor Applications

## Additional information

- The outputs of different Light Controllers S/XS must not be connected with each other
- All control gear that is connected to the output of the DALI Extender is synchronously operated in "broadcast" mode; the output side is not addressed.
- To ensure safe operation of the Light Controller $S / X S$, the maximum casing temperature at the measuring point $\left(t_{c}\right)$ must not be exceeded.
- Please refer to the manual at www.vossloh-schwabe.com/en/home/products/ light-management-systems-for-indoor-applications.html for exact instructions on how to configure the system using the controller.

## Extender

## Installation - Independent installation, e.g. in false ceilings

- Easy and time-saving installation due to end caps that snap into place without needing tools
- Clearance: min. 0.1 m to walls, ceilings, insulation and to other electronic devices; min. 0.25 m to sources of heat (e.g. lamps)
- Surface: solid, must not permit the extender to sink into insulation material
- Fastening: using 4 -mm screws

## Installation instructions

- Cross-section of primary/secondary conductor: 0.75-2.5 mm²
- Cable preparation (see right)
- Screw terminals: max. tightening torque $=0.4 \mathrm{Nm}$
- Length of the secondary bus cable: max. 300 m
- A standard DALI bus only features basic insulation. All DALI cables must be rated for mains voltage. The power supply and the DALI lead can be laid in a single cable (max. 100 m).
- Mains power cables and DALI cables should not be laid directly parallel to lamp cables $($ min. clearance $=0.25 \mathrm{~m})$.
- A maximum of 64 DALI operating devices in total can be connected

## Additional information

- The extender can only be operated if connected to a DALI control unit. Please refer to the respective operating instructions for information on the control unit
- The DALI extender is integrated into the DALI system using the "random address" assignment method.
- Three electrically connected DALI outputs make it easier to connect DALI ballasts. A maximum of 64 DALI operating devices in total can be connected
- The outputs of several extenders must not be connected with each other.
- All control gear that is connected to the output of the DALI Extender is synchronously operated in "broadcast" mode; the output side is not addressed.
- To ensure safe operation of the Extender, the maximum casing temperature at the measuring point $\left(t_{c}\right)$ must not be exceeded.

# Technical Details - Lighting Control System for Indoor Applications 

Circuit diagram of the Extender

| Extender |  |
| :---: | :---: |
| Ref. No. | 186194/186481 |
| Supply voltage | 220-240 V AC/DC, 0/50-60 Hz |
| Power consumption | 6.5 W |
| Control input | DALI in. acc. with IEC 62386-102/-201 |
| DALI output | max. 64 pcs. DALI operating devices or max. 200 mA (expandable with the Extender) |
| Ambient temperature $t_{a}$ | 0 to $50{ }^{\circ} \mathrm{C}$ |
| Casing temperature $t_{C}$ | max. $65^{\circ} \mathrm{C}$ |
| Degree of protection | IP20 |
| Protection class | 11 |
| Weight | 150 g |
| CE requirements | EMC in acc. with EN 61547, RFI in acc. with EN 55015, Safety in acc. with EN 61347-2-11 |

## MultiSensors

## Installation

## SM-E (Surface Mounted)

Prepare the cable accordingly and thread it through the back plate of the sensor at the side or from behind. Attach the back plate in the selected position using the two screws provided, then connect the cable to the sensor. Use two fingers to lightly press the springs of the sensor cover together and allow to lock into place along the guide rails inside the sensor's bottom face (see Fig. 1).

FM-E (Flush Mounted), with or without cord grip
Prepare the cable, connect to the sensor and attach cord grip if appropriate. Use two fingers to lightly press the sensor together and allow to lock into place in the pre-drilled hole ( 35 mm ) in the selected position (see Fig. 2).

## IL-E (In Luminaire)

Heed the dimension of the drilling template when inserting the sensor in the metal plate, which is $0.5-1 \mathrm{~mm}$ thick. Allow the sensor to lock into place in the precisely pre-drilled hole in the metal plate. Allow the sensor cover ring to lock into place from the other side in the recesses provided (see Fig. 3).

Fig. 2

Fig. 3

# Technical Details - Lighting Control System for Indoor Applications 

## Installation instructions

- Conductor cross-section of all terminals: $0.5-1.5 \mathrm{~mm}^{2}$ for both rigid and flexible conductors
- Preparation of the sensor cables (see right)
- As a standard DALI bus is not SELV-compliant, cables must be rated for mains voltage.
- The power supply and the DALI lead can be laid in a single cable provided the cable does not exceed a maximum length of 100 m , e.g. using NYM $5 \times 1.5 \mathrm{~mm}^{2}$
Please observe the maximum lengths of the DALI bus during installation:

|  | $\mathbf{1 . 5} \mathbf{m m}^{\mathbf{2}}$ | $\mathbf{1} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{0 . 7 5} \mathbf{m m}^{\mathbf{2}}$ | $\mathbf{0 . 5} \mathbf{m m}^{\mathbf{2}}$ |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{6 . 2 ~ \Omega} \mathbf{~ m a x .}$ | 300 m | 180 m | 130 m | 80 m |

## Additional information

- VS MultiSensors can only be operated in combination with a VS Light Controller from the LiCS indoor range.
- Please refer to the manual at www.vossloh-schwabe.com/en/home/products/ light-management-systems-for-indoor-applications.html for exact instructions on how to configure the sensors.
- To ensure safe operation of the sensors, the maximum permitted ambient temperature must not be exceeded.

Fig. 4

- The sensor must be positioned to ensure its reception range is not obstructed by objects, furniture, etc.
- See Fig. 4 for the sensor range.

The height specified in Fig. 4 is a reference value. For other and specifically greater heights, it may be necessary to test the sensitivity of the sensors on site as the sensitivity of the motion sensor decreases the higher up it is mounted.

## Circuit diagram of Sensors

## MovementSensors HB

## Installation MovementSensor HB 65

Prepare the cable accordingly. Open the housing cover and the protective caps for the connections. Thread the connection cables ( 230 V L, N + DALI control cable) through the protective cap closure and connect with push terminals. Close the protective caps. Before the housing cover is closed, attach the housing with the aid of 4 mm screws in the holes provided. During installation make sure that the sensor component is not touched. Installation position: any
See operating manual for the sensor range.

## Installation instructions

- To protect the device, please use a Type B circuit breaker ( 10 A or 16 A).
- Conductor cross-section of all terminals: $0.5-1.5 \mathrm{~mm}^{2}$ for both rigid and flexible conductors
- Preparation of the sensor cables (see on the right)
- As a standard DALI bus is not SELV-compliant, cables must be rated for mains voltage.
- The power supply and the DALI lead can be laid in a single cable provided the cable does not exceed a maximum length of 100 m , e.g. using NYM $5 \times 1.5 \mathrm{~mm}^{2}$.
Please observe the maximum lengths of the DALI bus during installation:

|  | $\mathbf{1 . 5} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{1} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{0 . 7 5} \mathbf{~ m m}^{\mathbf{2}}$ | $\mathbf{0 . 5} \mathbf{~ m m}^{\mathbf{2}}$ |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{6 . 2 \Omega \mathbf { ~ m a x } .}$ | 300 m | 180 m | 130 m | 80 m |

- The sensor must never be placed inside a luminaire.
- The sensor must be installed with a clearance of 1 m to the respective luminaire.

## Additional information

- VS HB sensors can only be operated in combination with a VS Light Controller from the LiCS indoor range.
- Please refer to the controller manual for exact instructions on how to configure the sensor.
- To ensure safe operation of the sensors, the maximum permitted ambient temperature must not be exceeded.
- The sensor must be positioned to ensure its reception range is not obstructed by objects, furniture, etc.
- Moving objects e.g. fans may be enough to lead to movement detection
- See Fig. 1 to 3 for detection range.

Fig. 2

| Distance | Sensing Range of MovementSensors Wall $\quad$ Ceiling |  |
| :---: | :---: | :---: |

## ELECTRONIC CONTROL OF OUTDOOR LIGHTING

## LidG <br> \author{ - OUTDOOR 

}- General lighting in public spaces
- General lighting in public spaces
- Lighting in the vicinity of buildings
- Lighting in tunnels
- Lighting for sports' venues
- Industrial lighting

The lighting solutions provided by Vossloh-Schwabe ensure that local authorities can save energy, achieve sustainable cost reductions and at the same time make a valuable contribution to reducing $\mathrm{CO}_{2}$ output. Using various lighting situations as examples, energy savings of up to $80 \%$ can be achieved.

Vossloh-Schwabe's light management systems enable centralised control of individual luminaires with the advantage of a constant online link and the ability to monitor the lighting system. But these intelligent, multifunctional VS controllers provide the same savings potential and high flexibility even without online connectivity.

## Typical Applications

ECO-FRIENDIY AND ECONOMICAL LIGHTING

#### Abstract

Many street lighting facilities are outdated and are therefore highly inefficient. This not only results in higher energy requirements, but also more maintenance work and higher investment costs. All this adds up to street lighting accounting for approx. 30-50\% of the entire power consumption recorded by municipal and other types of local authority - which amounts to a huge cost factor for public budgets to cover.

## Targeted Use of Light and Optimisation of Maintenance <br> Processes

Vossloh-Schwabe's LiCS Outdoor system makes it possible to dim individual luminaires or entire luminaire groups. Depending on the requirements, the degree to which the lighting level is dimmed can be sensorcontrolled or can comply with a preset level; the burn-in periods of discharge lamps can also be taken into consideration.

Considerable savings potential can be harnessed by need-driven programming and/or lighting control. Thanks to the system's convenient remote monitoring functions, it is possible to optimise maintenance processes as well as better plan maintenance work and budget for it in more detail.

## Flexible Structure

The complete LiCS Outdoor system is suitable both for new installations as well as for classic retrofits. The particularly flat designs of the controllers enable installation in almost all luminaires, especially luminaires featuring LED technology.

The system enables control of luminaires operated with magnetic ballasts as well as luminaires with up to four dimmable electronic ballasts with a
$1-10 \mathrm{~V}$ or DALI interface.

## Lighting Control System for Outdoor Applications

## FUNCTIONS OF THE LIGHT CONTROLLERS

MFF (Maintenance Factor Function)
With prolonged service life, light sources suffer a decrease in luminous flux and, as a result, in brightness. But thanks to the maintenance factor function, this can be compensated by the light management system so as to ensure luminous flux remains stable over the lamp's service life and, additionally, save energy. The flux reduction curve can be adjusted to the real luminous flux reduction by 3 support points.

ISD (Intelligent Switching Time Dimming)
During any one night phase, brightness and with that the output of the lighting system can be altered or the luminaire can be switched on/off up to a maximum of 10 times.

LsT (Control input)
In addition, using a control input (e.g. with a push button or motions ensor) the system can be switched to a certain lighting level for a freely configurable period of time.

RCR (Ripple Control Receiver)
Sound frequency reception module for typical sound frequencies of 100 Hz to 1.7 kHz ; TFR protocols on request.

## Lighting Control System for Outdoor Applications

## Smart Night

Independent, pre-programmed controllers are used for lighting control purposes. These controllers can also be individually reconfigured at a later point in time. In this regard, up to 4 lighting profiles can be transferred to the hand-held control unit and then transferred to each individual controller on site. In this case, data transfer is purely unidirectional.
iMCU - intelligent Multifunctional Controller Unit 260
iCTI - intelligent Configuration Tool 261
iCTI-USB - intelligent Configuration Tool with USB interface 261

## Flex Night

New lighting profiles can be transferred to several iMCU-series controllers at the same time. All iMCUs that are installed on the same supply line are then programmed with a new profile, while still allowing individual iMCUs to be excluded from receiving the new profile.

This can be achieved on site using a laptop and the iCTT , or using the iCTT connection at the control point of the street lighting or, remotely, using the iMICO, in which case the iMICO controller would be firmly installed at the control point.

## Managed Night

Power-line technology enables bidirectional data transfer using the 230 V supply line. As a result, controllers can be grouped together to form a high-performance network using just the cables provided (without needing any additional control lines) in almost any environment.

Data can thus be transferred to each controller connected to the network with a very high degree of reliability; if necessary, signal strength is automatically boosted, thus removing any restrictions in terms of distance.

iSCT - intelligent tablet PC ..... 272

## iMCU - intelligent Multifunctional Controller Units

## For outdoor luminaire control

These light controllers were specifically designed for independent operation to enable control of street lighting or lighting close to buildings.

Depending on the given task, the product can replace one or more individual products. The controllers are suitable for use with almost all electronic ballasts and LED drivers with a DALI or a 1-10 Volt interface. They also enable control of conventional magnetic ballasts that are with coil tapping points without needing any other components.

The control input LST can be used to connect a control phase, a motion detector, a key switch or a light sensor, but can also be used to receive simple data protocols.

## Technical Notes

Control output: DALI, 1-10 V or PWM for max. 1 EB, short-circuit-proof
Relay contacts: potential-free (input, opener, closing contact)
Storage temperature: -25 to $85^{\circ} \mathrm{C}$
Operating temperature: -25 to $80^{\circ} \mathrm{C}$
Humidity: non-condensing
Degree of protection: IP20 or IP67
Upgradeable firmware

## Galvanic Isolation

The electronic ballast does not feature potential isolation between input and output: as soon as the electronic ballast is connected to the controller, the control input of the electronic ballast is not potential-free.

iMCU - IP20
IP67

## IP20 version

IP67 version

## Typical Applications

| Type | Ref. No. | $\begin{aligned} & \text { Voltage AC } \\ & \text { V, Hz } \\ & \hline \end{aligned}$ | Power consumption mW | Control input LST V | Switching current $A(\lambda=0.8)$ | Connection | Weight g |

## iCTI - intelligent Hand-held Operating

 DeviceFor subsequent controller configuration

The iCTI features 4 memory cells for different lighting situations.

Standard connection: USB 2
OS: upgradeable firmware
The continually updated programming software can be downloaded at www.vossloh-schwabe.com/en/ home/products/light-management-systems-for-outdoor-applications/smart-night.html Dimensions: $180 \times 65 \times 40 \mathrm{~mm}$
Weight: 0.2 kg
Ref. No.: 186246

For subsequent controller configuration especially for luminaire manufacturing and maintenance Standard connection: USB 2
OS: upgradeable firmware
The continually updated programming software can be downloaded at www.vossloh-schwabe.com/en/ home/products/light-management-systems-for-outdoor-applications/smart-night.html
Ref. No.: 186392 iCTI-USB

## iCTT - intelligent <br> Configuration Technician Tool

## For subsequent configuration of lighting scenes

The push-in terminal delivered along with this port able configuration tool is located on a DIN rail (top-hat section) in the distribution board and is connected to the lighting circuit.

Reconfiguring lighting scenes at a later point in time involves using the push-in terminal and the iCTT's connector to make a connection to a laptop or PC. The MidNight Configurator software is then used to adjust the relevant settings and transfer these new values to the lighting system.

Once the configuration process has been completed, the iCTT is disconnected again and the protective cover of the push-in terminal is replaced.

## Technical Notes

Portable use
Dimensions (LxWxH): $103 \times 35 \times 25 \mathrm{~mm}$
Connection to the lighting system:
Push-in terminal with protection cover: MSTB 2.5/4-ST-5.08
Plug: MSTBVK 2.5/4-G-5.08, lead length: 1 mm
Connection to a laptop/PC:
RS-232 One DB9 male (Standard EIA),
lead length: approx. 0.3 m
Operating temperature: -20 to $70^{\circ} \mathrm{C}$
Humidity: $5-90 \%$ RH at max. $50^{\circ} \mathrm{C}$
Degree of protection: IP20

| Type | Ref. No. | Voltage AC <br> $\mathrm{V}, \mathrm{Hz}$ | Power consumption <br> mW | Control input LST <br> V | Switching current <br> $\mathrm{A}(\lambda=0.8)$ | Weight <br> g |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

| iCTT Terminal Block | $\mathbf{1 8 6 3 9 1}$ | Terminal block for iCTT |  |  |  |  |

## iMICO - intelligent Multifunctional Controller Units

## For outdoor luminaire control

By installing the iMICO in a street-side distribution board and using the MidNight function, it is possible to update the lighting profiles of an iMCU controller or of a dimmable electronic ballast from a central location without needing to install any additional wiring in the street.

This function is typically used in cases that require the lighting profile to be changed several times per year or if it needs to remain possible to deactivate dimmed output periods of a city's lighting system in a targeted manner, e.g. during city festivals or other events.

The web-based iMICO works on the iSITE web platform. To reconfigure a lighting profile, the server sends a text message to the iMICO via the mobile phone network. The iMICO then transfers the new configuration to the connected controllers or MidNight electronic ballasts by switching the mains phase or another free phase on and off. These controllers will even prevent any flickering in luminaires during signal transfer.

## Technical Notes

Operating temperature: -20 to $50^{\circ} \mathrm{C}$
Storage temperature: -25 to $75{ }^{\circ} \mathrm{C}$
Humidity during operation: 5-75\%
Protection class I
1 relay contact: potential-free (input, opener, closing contact)
Material: aluminium AlSi 12 (Fe)
Drill holes for cables for $\mathrm{MICO}-\mathrm{BI}$ :
2 PG metric fittings $(25 \times 1.5 \mathrm{~mm})$
2 PG metric fittings $(32 \times 1.5 \mathrm{~mm})$
1 PG metric fittings $(20 \times 1.5 \mathrm{~mm})$
1 fixing hole for antenna connection

## Interfaces

Transmission: mobile phone network, requires quad band SIM card
Protocols: SMS, GPRS
Internal modem: Telit 862
Internal and external antenna: MMCX

| Type | Ref. No. | Voltage AC <br> $\mathrm{V}, \mathrm{Hz}$ | Max. switching output <br> $\mathrm{A} / \mathrm{V}$ | Overvoltag protection <br> kV | Degree of protection | Dimensions <br> $\mathrm{LxW} \mathrm{\times H}(\mathrm{~mm})$ | Weight <br> g |

## iSITE MidNight intelligent Configuration Software

## For programming lighting situations using iMICO

iSITE can be accessed using any PC with an internet browser (preferably Google Chrome) and was developed to configure the iMICO controller. This convenient and quick method enables all lumi-n aires to be reprogrammed with new lighting profiles. The server-based supports Windows Server operating systems. The following actions can be controlled using the software:

- Creating various timer programs
- Group allocation of various iMICOs
- Assignment of groups and timer programs
- Graphic representation (maps) showing the positions of luminaires and iMICOs
- Sending text messages to groups or to individual iMICOs to transfer settings
- Generating notifications (text messages) to confirm that settings were successfully transmitted

## Ref. No.: 186244

## System requirements

- Memory RAM: 4GB

Memory HD: 2TB

- CPU: min. Dual Core,depending on the scope of the project
- Operating system: Windows server
- Data security: min. RAID 1 recommended RAID 5

## iLC - intelligent Luminaire Controller (built-in)

Vossloh-Schwabe's light control units of the "Managed Night" series work with power-line communication using the $C / B$ CENELEC band. Communication occurs in accordance with standardised directives EN 14908-1, EN 14908-3 and the Lonmark ${ }^{\circledR}$ OLC profile (outdoor luminaire controller profile).
iLC can be used as independent control unit in a light management system. The controller is integrated into a LON power-line light management system that requires a network connection to a central module (iDC)

Once installed in a light management system, the controller delivers various performance data and status reports, for example voltage, current, power factor, energy consumption, lighting hours and temperature. Limits must be defined for each measured value, which are then monitored in the controller with a report being transmitted to the master system if limits are exceeded. As a result, the controller itself already intelligently monitors the luminaire. The calibrated performance data are available within a tolerance of $1 \%$

## Technical Notes

Dimensions ( $\mathrm{L} \times \mathrm{W} \mathrm{WH}$ ): : $93 \times 58 \times 30 \mathrm{~mm}$
Control output: DALI or $1-10 \mathrm{~V}$ for max. 4 EBs ,

> short-circuit-proof

Bistable relay output: closing contact
Low-voltage control input: $1 \times 5 \mathrm{~V}$ DC
for sensors with "open collector" output or
potential-free relay
Connection terminals: $0.5-1.5 \mathrm{~mm}^{2}$
Storage temperature: -25 to $85^{\circ} \mathrm{C}$
Operating temperature: -25 to $80^{\circ} \mathrm{C}$
Humidity: non-condensing
Degree of protection: IP20

## iLC - intelligent Luminaire Controller (built-in)

Control input LST can be used for a control phase, a motion detector, a key switch, a light sensor or, if operated independently, to receive simple protocols.

## Galvanic Isolation

The electronic ballast does not feature potential isolation between input and output: as soon as the electronic ballast is connected to the controller, the control input of the electronic ballast is not potential-free.

## Typical Applications

Lighting for public spaces
Lighting in the vicinity of buildings
Lighting for tunnels

** Protocols on request

## iDC - intelligent Data <br> Concentrator

The iDC forms the master of the "Managed Night" light managment system and functions as the central connection interface to the software of the master system. The iDC can be programmed and also features application programs that are perfect for controlling lighting systems.

The following functions are an integral part of the product: timer programs, monitoring of limit values plus alarm function and alarm transmission, data conversion, data logging and email client.

Fitted with various interfaces such as SO for counter registration, the $M$ bus for remote counter reading or the MOD bus for extended sensor and actuating functions, the iDC can adapt to suit almost any control task.

## Technical Notes

Dimensions (BxHxT): $280 \times 230 \times 112 \mathrm{~mm}$
Material: aluminium AlSi 12 ( Fe )
Drill holes for cables:
2 PG metric fittings $(25 \times 1.5 \mathrm{~mm})$
2 PG metric fittings $(32 \times 1.5 \mathrm{~mm})$
1 PG metric fittings $(20 \times 1.5 \mathrm{~mm})$
1 fixing hole for antenna connection
Interfaces for power-line carriers
Inputs: 2 digital inputs 30 V DC
Optionally extendable using a cut-off relay for
230 V AC: 2 impulse-counter inputs typ. of SO
Outputs: 2 relay outputs $230 \mathrm{~V} \mathrm{AC;} 10 \mathrm{~A}$
Ethernet Port 10/100BaseT, auto-selecting,
RS232 Interface for GSM/GPRS modem,
for up to 200 controllers
LON power line carrier communication:
Protocols: in acc. with ANSI CEA 709.1 / EN 14908-1 on the supply voltage (tri/single phase)
Transmission: in acc. with ANSI CEA 709.3 / EN 14908-3
IP communication: XML / SOAP, http, FTP, UDP
FME antenna connection: Male
Storage temperature: -25 to $85^{\circ} \mathrm{C}$
Operating temperature: -25 to $60^{\circ} \mathrm{C}$
Humidity: non-condensing
Degree of protection: IP65, Protection class I

The iDC also provides a very well documented, web-based XML/SOAP interface or an optionally available OPC driver (open process control) to the SCADA (Supervisory Control and Data Acquisition) system. This makes it possible to integrate the iDC also into any BA (Building Automation) or control system.

The iLIC software was specifically developed to enable control of the iDC. Various extension options are available to suit common communication requirements: GPRS...G3, IP (CAT5), Fibre optic (FO) Single Mode, Fibre optic (FO) Multi Mode, and optionally also WLAN on request.

## iCT - intelligent

Configuration Software

- Specifically developed for commissioning an iDC
- Convenient and quick installation of all controllers in a network segment
- Quick commissioning thanks to clear identification of every controller with a barcode (scanner optional)
- The controller is configured in accordance with OLC-Lonmark ${ }^{\circledR}$ conventions

| Type | Ref. No. | Voltage AC <br> $\mathrm{V}, \mathrm{Hz}$ | Average power consumption <br> W | Transmission mode <br> VA | Weight <br> $g$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| iDC-GPRS.3G | $\mathbf{1 8 6 2 3 0}$ | $230 \pm 10 \%, 50 \pm 1 \%$ | 7 | 12 | 4400 |

## iLUX - intelligent <br> Lux Meter with Power Line Interface

The high-quality light sensor directly measures and delivers digital light metrics in lux to a light management system for the purpose of lighting control.

Lighting systems operated with or without a light management system can be switched on or off at a specific lux value via internal relays. The measured lux values can then be transmitted to the lighting system via the power line. Depending on the respective lighting level required in each case, it is therefore possible to independently control luminaires in different areas, e.g. at major and minor roads, pedestrian crossings and in parks.

The compact sensor can be fixed to the luminaire pole or a wall using the enclosed mounting bracket.

## Technical Notes

Dimensions (LxW×H): $165 \times 165 \times 104 \mathrm{~mm}$
Sensor casing: aluminium with a PC cover,
sensor unit protected by opal glass
Connection cable to the controller: 10 m (special configurations available on request)
Storage temperature: -25 to $85^{\circ} \mathrm{C}$
Operating temperature: -25 to $80^{\circ} \mathrm{C}$
Humidity: non-condensing
Degree of protection: IP65
Weight of mounting bracket: 300 g
Casing and connection details of the iPC controller
(intended for installation in luminaire poles),
see page 208

## Typical Applications

Lighting for public spaces
Lighting in the vicinity of buildings

| Type | Ref. No. | Note | Weight <br> $g$ |
| :--- | :--- | :--- | :--- |
| iLUX | $\mathbf{1 8 6 2 3 1}$ | Use only in combination with iPC-LUX (Ref. No.: 186235) | 1000 |

## iPL-NI Powerline Network Interface

For subsequent iLUX configuration without network operation
Data communication: notebook / PC and ilUX using a 230 V AC power supply cable Operating system: XP and higher
For parameter configuration and firmware updates
Ref. No.: 186265

## iCCU - intelligent, Capacitive Coupling <br> Unit

Intelligent, capacitive coupling unit for powerline communication.
Powerline signals are transferred using the $B / C$ frequency range in acc. with Cenelec specifications. The unit is suitable for direct installation without requiring configuration and is transparent for data transfer purposes. The unit draws no power when operated in standby mode.
No software-based configuration required
Connection with an NH fuse possible on request

## Technical notes

Casing: PC
Dimensions (LxWxH): $180 \times 94 \times 60 \mathrm{~mm}$
Mains voltage: $230 \mathrm{~V} \mathrm{AC} \pm 10 \%, 50 \mathrm{~Hz}$
Power consumption: 0.0 W
Leads: High-voltage silicone cable,
stranded conductors $1 \mathrm{~mm}^{2}$, length: 80 mm Storage temperature: -25 to $85^{\circ} \mathrm{C}$
Operating temperature: -25 to $65^{\circ} \mathrm{C}$
Degree of protection: IP65, Protection class I
Weight: 770 g
Resistance against surge voltage: 3 kV
Ref. No.: 186345

## iBRIDGE - intelligent Wireless Bridge

## For wireless signal transfer

iBRIDGE enables wireless transfer of control signals of the power-line network to adjacent lighting circuits without requiring a cable connection.

This makes it possible to jointly control several smaller, independent circuits within a larger lighting network and serves to reduce the number of required iDCs (data concentrators) since a larger number of controllers can be configured using a single iDC.

Sections of the lighting cable that are not suitable for power-line communication due to severe local interference can also be bridged using iBRIDGE.

Just like a controller, iBRIDGE is commissioned using the light management system and does not require any special software installation.

## Typical applications

Lighting for public spaces, street lighting
Lighting in the vicinity of buildings
Company premises, warehouses, sports facilities

## Technical Notes

Dimensions ( $\varnothing \times H$ ): $105 \times 120 \mathrm{~mm}$
Mains voltage: $120-277 \mathrm{VAC} \pm 10 \%$
Mains frequency: $50-60 \mathrm{~Hz}$
Wireless frequency: 2.4 GHz
Power line communication frequency: Dual $115 \mathrm{~kb} / \mathrm{s}$ and $132 \mathrm{~kb} / \mathrm{s}$
Wireless output: 10 mW
Operating temperature: -40 to $85^{\circ} \mathrm{C}$
Humidity during the operation: non-condensing
Connection: in acc. with NEMA Socket Standard BS5972
Degree of protection: IP66
Weight: 190 g
Ref. No.: 186275

## iLIC - intelligent Luminaire Information Centre

## For outdoor luminaire control

The luminaire information centre is the central control instrument of a light management system. All connect ed luminaires can be controlled, monitored and displayed using a web-based server application

The server-based software supports both Windows and Linux operating systems. Firefox or Internet Explorer are the frontend applications to operate, control or display the light management system. The following actions can be controlled via the software:

- Switching individual luminaires on or off ahead of defined luminaire groups
- Defining the most diverse timer settings
- Evaluation and display of the lighting system status depending on various types of error message
- Evaluation of energy consumption at individual luminaire and luminaire-group level
- Graphic display of all acquired data over time |voltage, current, power, temperature, power factor, lighting hours, ...)

## Ref. No.: 186243

Based on the software design, the lighting system displays information as a tree-like structure showing city, suburb, street, luminaire or can be broken down according to other criteria. The multi-client software also makes it possible to restrict rights and functions for different people or groups of people depending on their level of authorisation.

As the software is a wholly web-based application, system maintenance can be carried out via the web (global) or can be restricted to just the company using its LAN network, all depending on the system structure. Numerous users can access the system at the same time. Optional interfaces are also available to connect to other asset management systems.

## System requirements

- Server: state-of-the-art
- Memory RAM: 4GB

Memory HD: 2TB

- CPU: min. Dual Core, depending on the scope of the project
- Operating system: XP, Windows 7, Linux, Distribution, VM operation is possible
- Data security: min. RAID 1 recommended RAID 5

## iOPC - intelligent OPC DA Server

## iOPC DA Sever for connecting iDCs to typical control technology systems

The iOPC Server is used to integrate iDCs into standardised SCADA/control technology systems. The software runs on Microsoff ${ }^{\circledR}$ operating systems and provides a standard interface for integrating data points.
OPC DA specification: DA 2.05
Type: iOPC 1.001 Tool
Ref. No.: 186358
for max. 3 iDC
Ref. No.: 186359 for max. 10 iDC
Ref. No.: 186385 for max. 20 iDC

## Lighting Control System for Outdoor Applications - Accessories

## iHFS - intelligent High-Frequency

## Sensor

## Motion sensor for street lighting

The iHFS enables energy-efficient and need-driven control of street lighting and lighting in the vicinity of buildings using intelligent high-frequency-based object detection. The sensor system functions reliably at all times irrespective of light and weather conditions.

The iHFS is available as a modular and an integrated system. With the modular version, up to 3 sensor modules can be attached to the luminaire pole, which enables simultaneous detection of objects from different directions. The detection field can be individually defined via the sensor's mounting angle.

With the integrated version, one sensor is typically mounted per luminaire. The sensor is installed directly in the luminaire.

iHFS

## Installation

The sensors are attached to the luminaire pole using stainless steel tension bands (included in the scope of delivery). The direction of a sensor's detection field can be individually adjusted via the swivel-head holder.

## Technical Notes

For Light Controller iPC-HFS (s. p. 266)
Dimensions (LxW×H): $83 \times 75 \times 67 \mathrm{~mm}$ plus holder
Operating temperature: -20 to $70^{\circ} \mathrm{C}$
HF technology: 5.8 GHz
Cable length: 10 m

| Type | Note | Ref. No. | Power consumption <br> W | Reach | Opening angle |
| :--- | :--- | :--- | :--- | :--- | :--- |
| HHFS-120 1 | Sensor | $\mathbf{1 8 6 2 5 3}$ | $0.7-1.5(1-3$ sensors | up to 22 m | $120^{\circ}$ |

Sensor for built-in into luminaires on request.

## Detection area

## iSCT - intelligent <br> Software <br> Configurations Tool

The Managed Night power-line system as well as the two Smart and Flex Night systems can be controlled using the extremely robust tablet PC made by Panasonic and the associated software.

## Panasonic toughpad FZ-G 1

## for software configuration

- Full-ruggedized Windows 8 Tablet
- Intel® Core $^{\text {TM }}$ i5-3437U vPro processor
- Windows 8 Pro, Intel HD 4000 Graphic
- Daylight-readable 10,1" WUXGA outdoor display with IPSa technology (1920 $\times 1200$ ) with up to $800 \mathrm{~cd} / \mathrm{m}^{2}$
- Capacitive 10 -point multi-touch screen and digitizer
- Standard connections: USB 3.0, HDMI and headphones
- Pre-configurable port (serial, LAN, microSD or USB 2.0)
- Up to 8 hours of battery life; battery can be changed by user
- Protected against water and dust
- Will survive being dropped from a height of up to 120 cm without suffering damage (as tested by Panasonic)
- With preinstalled and configured light management software
Dimensions: $270 \times 188 \times 9 \mathrm{~mm}$, Weight: approx. 1.1 kg
Ref. No.: 186251
